Cisco UCS B460 M4 Blade Server

CONTENTS

OVERVIEW

The Cisco® UCS B460 M4 High-Performance Blade Server (*Figure 1*) is a four-socket, full-width double-high blade server supporting the Intel® Xeon® E7-4800 v2 and E7-8800 v2 series processor family CPUs, with up to 6 terabytes[1] (TB) of double-data-rate 3 (DDR3) memory in 96 slots, up to 4 small form factor (SFF), hot-swappable [2] drive bays for hard disk drives (HDDs) or solid state drives (SSDs), four dual-port and two quad-port mezzanine card connections for up to 320 Gbps aggregate I/O bandwidth. The Cisco UCS B460 M4 server is designed to power the most demanding enterprise applications.

As shown in *Figure 1*, the B460 M4 server consists of two Scalable M4 Blade Modules and a Scalability Connector that cross-connects the two Blade Modules and allows them to function as a single server. The Blade Module on the bottom is the "Master" and the Blade Module on the top is the "Slave."

The server is controlled with UCS Manager (UCSM) version 2.2(2).

Figure 1   Cisco UCS B460 M4 Blade Server

Front View

Notes . . .

1. A maximum of 6 TB memory is available using 64 GB DIMMs.
2. Hot-swap replacement means that you do not have to precondition or shut down the component in software before you remove it.

DETAILED VIEWS

Chassis Front View

Figure 2 shows the front of the Cisco UCS B460 M4 Blade Server.

Figure 2   Chassis Front View
1	Hard drive bay 3	7	Network link status LED
2	Hard drive bay 4	8	Blade health LED
3	Hard drive bay 2	9	Local console connection[1]
4	UCS Scalability connector	10	Beaconing button and LED
5	Hard drive bay 1	11	Reset button access
6	Power button and LED	—	—

Notes . . .

1. See SUPPLEMENTAL MATERIAL on page 39 for more information about the KVM cable that plugs into the console port.

BASE SERVER STANDARD CAPABILITIES and FEATURES

Table 1 lists the capabilities and features of the base server. Details about how to configure the server for a particular feature or capability (for example, number of processors, disk drives, or amount of memory) are provided in CONFIGURING the SERVER on page 7.

Table 1   Capabilities and Features

Capability/Feature	Description
Chassis	The B460 M4 Blade Server mounts in a Cisco UCS 5100 series chassis and occupies four chassis slots (each chassis slot is a half-width slot).
CPU	Four Intel® Xeon® E7-8800 v2 or E7-4800 v2 series processor family CPUs.
Chipset	Intel® C602J chipset
Memory	96 slots for registered DIMMs (48 per chassis). Maximum memory capacity is 6 TB[1]. This is accomplished with 96 DIMMs, consisting of 48 DIMM kits (2 64 GB matched DIMMs per kit).
Expansion slots	Two dual-port slots and one quad-port mezzanine slot are provided that can accommodate PCIe compatible adapters. One of the dual-port slots is dedicated for the VIC 1240 or VIC 1340 adapter which provides Ethernet and Fibre Channel over Ethernet (FCoE) NOTE: The Cisco VIC 1200 Series (1240 and 1280) is compatible in UCS domains that implement both 6100 and 6200 Series Fabric Interconnects. However, the Cisco VIC 1300 Series (1340 and 1380) is compatible only with the 6200 Series Fabric Interconnects. The other dual-port slot and the quad-port slot are used for various types of Cisco adapters and Cisco UCS Storage Accelerator adapters. The VIC 1280 and VIC 1380 can only be plugged into the quad-port slot.
Storage controller	Two LSI SAS3008 12G SAS RAID controllers, one in each Blade Module, each providing 12 Gbps SAS connectivity. Provides RAID 0, 1, and JBOD capability.
Internal storage devices	■ Up to four optional front-accessible, hot-swappable hard disk drives (HDDs) or solid state drives (SSDs), two per Blade Module. ■ One optional USB flash drive, mounted inside the "Master" Blade Module. ■ Dual sockets for optional Flexible Flash cards on the front left side of the "Master" Blade Module.

Table 1   Capabilities and Features *(continued)*

Capability/Feature	Description
Video	The Cisco Integrated Management Controller (CIMC) provides video using the Matrox G200e video/graphics controller: ■ Integrated 2D graphics core with hardware acceleration ■ DDR2/3 memory interface supports up to 512 MB of addressable memory (8 MB is allocated by default to video memory) ■ Supports display resolutions up to 1920 x 1200 16bpp @ 60Hz ■ High-speed integrated 24-bit RAMDAC ■ Single lane PCI-Express host interface running at Gen 1 speed Note that the two CIMCs (one in each server chassis) work together.
Interfaces	One front-accessible console connector on the master server chassis (see SUPPLEMENTAL MATERIAL on page 39)
Power subsystem	Integrated in the Cisco UCS 5100 series chassis
Fans	Integrated in the Cisco UCS 5100 series chassis
Integrated management processor	The built-in Cisco Integrated Management Controller (CIMC) GUI or CLI interface enables you to monitor the server inventory, health, and system event logs.

Notes . . .

1. A maximum of 6 TB memory is available using 64 GB DIMMs.

Cisco UCS B460 M4 Blade Server

CONFIGURING the SERVER

Follow these steps to configure the Cisco UCS B460 M4 Server:

STEP 1 VERIFY BASE SKU

Verify the product ID (PID) of the base server as shown in *Table 2*.

Table 2   PID of the Base B460 M4 Server

Product ID (PID)	Description
UCSB-EX-M4-1A	UCS Scalable M4 Blade Module w/o CPU/DIMM/HDD for B460 M4

The B460 M4 base server:

■ Includes two full-width Scalable M4 Blade Modules and a Scalability Connector that interconnects the two Blade Modules. \

■ Does not include CPUs, memory DIMMs, SSDs, HDDs, or mezzanine cards.

> **NOTE:** Use the steps on the following pages to configure the server with the components that you want to include.

> **NOTE:** The B460 M4 server consists of two Scalable M4 Blade Modules and a Scalability Connector that cross-connects the two Blade Modules. The Blade Module on the bottom is the "Master" and the Blade Module on the top is the "Slave". The optional USB flash and Flexible Flash cards must be mounted in the "Master" Blade Module of B460 M4 server; if they are in the "Slave" Blade Module, they are not recognized and do not operate.

> **NOTE:** If the B460 M4 server is mixed with other full-width or half-width blades in the chassis, the B460 M4 must occupy the bottom two full-width slots in the chassis. The chassis should be loaded with the largest server on the bottom, starting with B460 M4 on the bottom, followed by full-width blades above, and the half-width blades at the very top of the chassis.

To upgrade from a B260 M4 server to a B460 M4 server:

■ Your current B260 M4 server must be configured with two identical Intel® Xeon® E7-8800 v2 or two identical E7-4800 v2 series processor family CPUs. A B260 M4 with E7-2800 v2 CPUs cannot be upgraded.

■ Order the upgrade kit (PID UCSB-EX-M4-1E-U), which consists of the following:

— One Scalable M4 Blade Module

— One Scalability Connector

■ Configure the new Scalable M4 Blade Module with two Intel Xeon E7-8800 v2 or E7-4800 v2 series processor family CPU that are identical to the two processors in the B260 M4 server to be upgraded.

NOTE: The two CPUs in the original B260 M4 server and the two CPUs in the Scalable M4 Blade Module from the upgrade kit must be identical.

■ Configure both B260 server chassis with like kind DIMMs. All DIMMs must be either RDIMMs or LRDIMMs.

■ Remove the Scalability Terminator from your original B260 M4. Install the new Scalable M4 Blade Module from the upgrade kit in the chassis slot above or below. Then install the new Scalability Connector into the front of both Blade Module, connecting them together. You now have a B460 M4 server, consisting of two Scalable M4 Blade Modules ganged together by the Scalability Connector.

STEP 2 CHOOSE CPU(S)

The standard CPU features are:

■ Intel Xeon E7-8800 v2 or E7-4800 v2 series processor family CPUs

■ Intel C602J chipset

■ Cache size of up to 37.5 MB

Choose CPUs

The available CPUs are listed in *Table 3*.

Table 3 Available CPUs: Intel Xeon E7-4800 v2/E7-8800 v2 Family

Product ID (PID)	Intel Number	Clock Freq (GHz)	Power (W)	Cache Size (MB)	Cores	QPI	Highest DDR3 DIMM Clock Support (MHz)
UCS-CPU-E78893B	E7-8893 v2	3.4	155	37.5	6	8.0	1600
UCS-CPU-E78891B	E7-8891 v2	3.2	155	37.5	10	8.0	1600
UCS-CPU-E78880LB	E7-8880L v2	2.2	105	37.5	15	8.0	1600
UCS-CPU-E78857B	E7-8857 v2	3.0	130	30	12	8.0	1600
UCS-CPU-E74890B	E7-4890 v2	2.8	155	37.5	15	8.0	1600
UCS-CPU-E74880B	E7-4880 v2	2.5	130	37.5	15	8.0	1600
UCS-CPU-E74870B	E7-4870 v2	2.3	130	30	15	8.0	1600
UCS-CPU-E74860B	E7-4860 v2	2.6	130	30	12	8.0	1600
UCS-CPU-E74850B	E7-4850 v2	2.3	105	24	12	7.2	1600
UCS-CPU-E74830B	E7-4830 v2	2.2	105	20	10	7.2	1600
UCS-CPU-E74820B	E7-4820 v2	2.0	105	16	8	7.2	1600
UCS-CPU-E74809B	E7-4809 v2	1.9	105	12	6	6.4	1333

Approved Configurations

(1) Four-CPU Configuration

■ Choose four identical CPUs from any one row in *Table 3*.

Cisco UCS B460 M4 Blade Server

Caveats

■ You must choose two identical CPUs.

NOTE: The B260 M4 server consists of a Scalable M4 Blade Module and a Scalability Terminator that plugs into the front of the blade module.

You can upgrade a B260 M4 blade server later to a B460 M4 server; however, each B260 M4 server must be configured with two identical Intel Xeon E7-8800 v2 or E7-4800 v2 series processor family CPUs. A B260 M4 with E7-2800 v2 CPUs cannot be upgraded See for details on upgrading.

STEP 3 CHOOSE MEMORY

The standard memory features are:

■ DIMMs

— Clock speed: 1600, 1333, or 1066 MHz

— Ranks per DIMM: 4 (for 32 GB DIMMs), 2 (for 8 or 16 GB DIMMs),
or 8 (for 64 GB DIMMs)

— Operational voltage: 1.5 or 1.35 V

— Registered DIMM (RDIMM) or load-reduced DIMM (LRDIMM)

NOTE: You cannot mix RDIMMs with LRDIMMs

■ Each CPU controls four serial memory interface 2 (SMI-2) channels. Memory buffers convert
each SMI-2 channel into two DDR3 subchannels. Memory is organized as 3 DIMMs per
subchannel, totaling 6 DIMMs per SMI-2 channel. See *Figure 3*.

NOTE: Memory mirroring is supported and settable using the UCSM Service Profile
"Memory RAS Configuration" setting.

Cisco UCS B460 M4 Blade Server

Figure 3   B460 M4 Memory Organization

"Slave" Blade Module mounted on top

"Master" Blade Module mounted on bottom
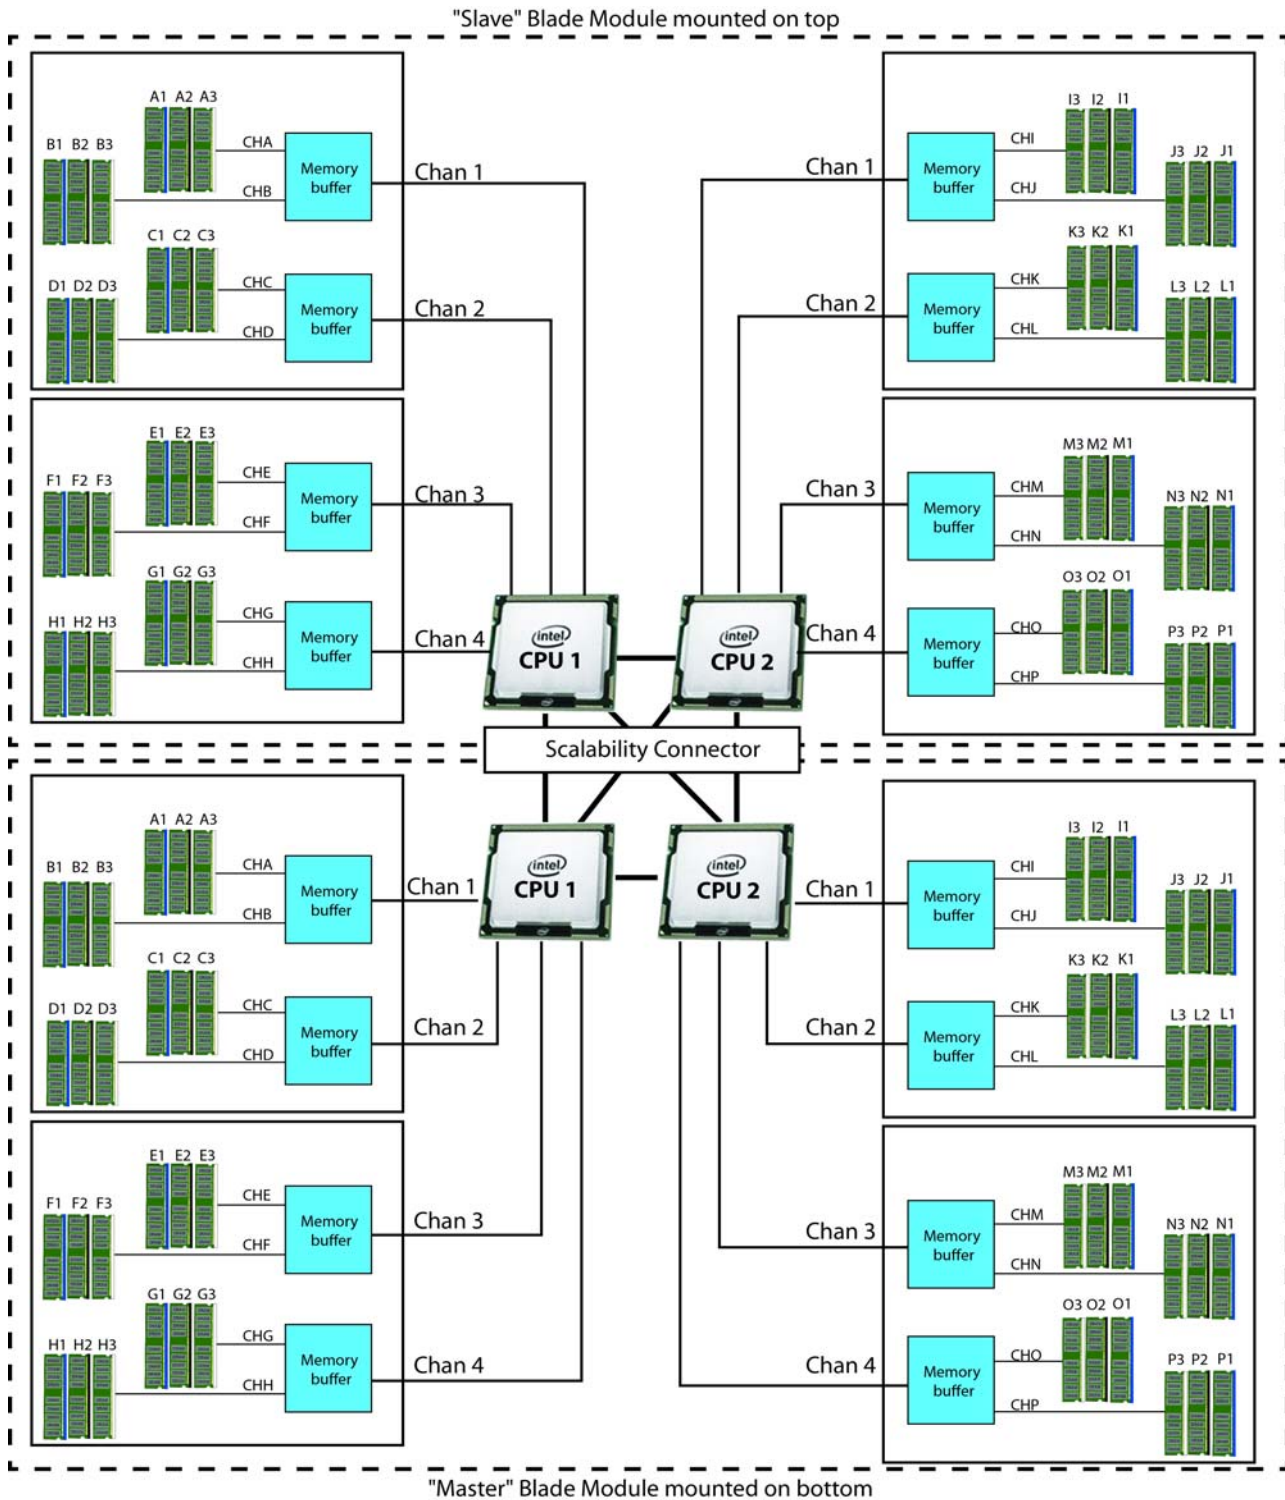

96 DIMMS, 6 TB maximum memory, 4 memory channels per CPU, up to 3 DIMMs per memory subchannel

Select DIMMs

DIMMs are available as two-DIMM kits. Each of the product IDs in *Table 4* specifies two DIMMs.

Table 4   Available DDR3 DIMMs

Product ID (PID)	PID Description	Voltage	Ranks/ DIMM
DIMM Pair Kit Options (2 DIMMs per kit)			
UCS-ML-2X648RY-E	2x64GB DDR3-1600-MHz LRDIMM/PC-12800/octal rank/x4	1.5 V	8
UCS-ML-2X324RY-E	2x32GB DDR3-1600-MHz LRDIMM/PC-12800/quad rank /x4	1.5/1.35 V	4
UCS-MR-2X162RY-E	2X16GB DDR3-1600-MHz RDIMM/PC-12800/dual rank/x4	1.5/1.35 V	2
UCS-MR-2X082RY-E	2X8GB DDR3-1600-MHz RDIMM/PC-12800/dual rank/x2	1.5/1.35 V	2
Memory Mirroring Option			
N01-MMIRROR	Memory mirroring option		

Approved Configurations

(1) 4-CPU Configuration

■ 96 DIMMs capacity total, up to 24 DIMMs per CPU

■ Select a minimum of 1 DIMM kit (2 DIMMs) or a maximum of 12 DIMM kits (24 DIMMs) per CPU The DIMMs for each CPU will be placed by the factory as shown in *Table 5*. DIMM labels shown in parentheses are DIMM pairs. Refer also to *Figure 3 on page 13* and DIMM and CPU Layout on page 42 for more information about DIMM placement and labeling.

Table 5   DIMM Population Order

DIMMs per CPU	CPU 1 DIMMs	CPU 2 DIMMs
2	(A1, B1) - blue slots	(O1, P1) - blue slots
4	(A1, B1) (C1, D1) - blue slots	(O1, P1) (L1, K1) - blue slots
6	(A1, B1) (C1, D1) (E1, F1) - blue slots	(O1, P1) (L1, K1) (M1, N1) - blue slots
8	(A1, B1) (C1, D1) (E1, F1) (G1, H1) - blue slots	(O1, P1) (L1, K1) (M1, N1) (J1, I1) - blue slots
10	(A1, B1) (C1, D1) (E1, F1) (G1, H1) - blue slots (A2, B2) - black slots	(O1, P1) (L1, K1) (M1, N1) (J1, I1) - blue slots (O2, P2) - black slots
12	(A1, B1) (C1, D1) (E1, F1) (G1, H1) - blue slots (A2, B2) (C2, D2) - black slots	(O1, P1) (L1, K1) (M1, N1) (J1, I1) - blue slots (O2, P2) (L2, K2) - black slots

Cisco UCS B460 M4 Blade Server

Table 5   DIMM Population Order *(continued)*

DIMMs per CPU	CPU 1 DIMMs	CPU 2 DIMMs
14	(A1, B1) (C1, D1) (E1, F1) (G1, H1) - blue slots (A2, B2) (C2, D2) (E2, F2)- black slots	(O1, P1) (L1, K1) (M1, N1) (J1, I1) - blue slots (O2, P2) (L2, K2) (M2, N2) - black slots
16	(A1, B1) (C1, D1) (E1, F1) (G1, H1) - blue slots (A2, B2) (C2, D2) (E2, F2) (G2, H2)- black slots	(O1, P1) (L1, K1) (M1, N1) (J1, I1) - blue slots (O2, P2) (L2, K2) (M2, N2) (J2, I2)- black slots
18	(A1, B1) (C1, D1) (E1, F1) (G1, H1) - blue slots (A2, B2) (C2, D2) (E2, F2) (G2, H2)- black slots (A3, B3) - white or ivory slots	(O1, P1) (L1, K1) (M1, N1) (J1, I1) - blue slots (O2, P2) (L2, K2) (M2, N2) (J2, I2)- black slots (O3, P3) - white or ivory slots
20	(A1, B1) (C1, D1) (E1, F1) (G1, H1) - blue slots (A2, B2) (C2, D2) (E2, F2) (G2, H2)- black slots (A3, B3) (C3, D3)- white or ivory slots	(O1, P1) (L1, K1) (M1, N1) (J1, I1) - blue slots (O2, P2) (L2, K2) (M2, N2) (J2, I2) - black slots (O3, P3) (L3, K3)- white or ivory slots
22	(A1, B1) (C1, D1) (E1, F1) (G1, H1) - blue slots (A2, B2) (C2, D2) (E2, F2) (G2, H2)- black slots (A3, B3) (C3, D3) (E3, F3) - white or ivory slots	(O1, P1) (L1, K1) (M1, N1) (J1, I1) - blue slots (O2, P2) (L2, K2) (M2, N2) (J2, I2) - black slots (O3, P3) (L3, K3) (M3, N3) - white or ivory slots
24	(A1, B1) (C1, D1) (E1, F1) (G1, H1) - blue slots (A2, B2) (C2, D2) (E2, F2) (G2, H2)- black slots (A3, B3) (C3, D3) (E3, F3) (G3, H3) - white or ivory slots	(O1, P1) (L1, K1) (M1, N1) (J1, I1) - blue slots (O2, P2) (L2, K2) (M2, N2) (J2, I2) - black slots (O3, P3) (L3, K3) (M3, N3) (J3, I3) - white or ivory slots

Caveats

■ Memory Mode. System speed is dependent on how many DIMMs are populated per channel, the CPU DIMM speed support, and the BIOS memory mode. The BIOS default memory mode is performance mode. However, the BIOS can be changed to support lockstep mode.

— Memory Performance Mode. In this mode, the main memory channel from the CPU to the memory buffer runs at double the clock rate of each of the two memory subchannels from the buffer to the DIMMs, and each DIMM subchannel is accessed sequentially. For example, if the CPU channel clock speed is 2667 MHz, each of the DIMM subchannels operates at 1333 MHz. For this reason, performance mode is referred to as 2:1. Performance mode does not provide data protection, but can yield up to 1.5 times the performance of lockstep mode and is the best choice for high throughput requirements.

— Memory Lockstep Mode. In this mode, the main memory channel from the CPU to the memory buffer runs at the same clock rate of each of the two memory subchannels from the buffer to the DIMMs, and both DIMM subchannels are accessed simultaneously for a double-width access. For example, if the CPU channel clock speed is 1600 MHz, each of the DIMM subchannels operates at 1600 MHz. For this reason, lockstep mode is referred to as 1:1. Memory lockstep mode provides protection against both single-bit and multi-bit errors. Memory lockstep lets two memory channels work as a single channel, moving a data word two channels wide and providing eight bits of memory correction.

■ CPU Effect on DIMM Performance

Table 6   CPU Effect on DIMM Performance

CPU Memory Mode	Advanced CPU[1] 8.0 GT/s QPI	Standard CPU[2] 7.2 GT/s QPI	Basic CPU[3] 6.4 GT/s QPI
Lockstep Mode (1:1)	1600 MHz	1600 MHz	1333 MHz
Performance Mode (2:1)	1333 MHz	1066 MHz	1066 MHz

Notes . . .
   1. CPU examples: E7-4890/4880/4870/4860 v2, E7-8893/8891/8857 v2
   2. CPU examples: E7-4850/4830/4820 v2
   3. CPU example: E7-4809 v2

■ DIMM Clock Speeds

   DIMMs run at various clock speeds depending on the DIMM voltage and number of DIMMs per channel. See *Table 7* and *Table 8*.

Table 7   DIMM Performance (at 1.5 V)

DIMM GB/Rank/Type	Performance Mode (2:1) 1.5 V DIMM			Lockstep Mode (1:1) 1.5 V DIMM		
	1 DPC	2 DPC	3 DPC	1 DPC	2 DPC	3 DPC
8 GB/2R/RDIMM	1333 MHz	1333 MHz	1066 MHz	1333 MHz	1333 MHz	1066 MHz
16 GB/2R/RDIMM	1333 MHz	1333 MHz	1066 MHz	1333 MHz	1333 MHz	1066 MHz
32 GB/4R/LRDIMM	1333 MHz	1333 MHz	1333 MHz	1600 MHz	1600 MHz	1333 MHz
64 GB/8R/LRDIMM	1066 MHz	1066 MHz	1066 MHz	1066 MHz	1066 MHz	1066 MHz

Table 8   DIMM Performance (at 1.35 V)

DIMM GB/Rank/Type	Performance Mode (2:1) 1.35 V DIMM			Lockstep Mode (1:1) 1.35 V DIMM		
	1 DPC	2 DPC	3 DPC	1 DPC	2 DPC	3 DPC
8 GB/2R/RDIMM	1333 MHz	1066 MHz	N/A	1333 MHz	1066 MHz	N/A
16 GB/2R/RDIMM	1333 MHz	1066 MHz	N/A	1333 MHz	1066 MHz	N/A
32 GB/4R/LRDIMM	1333 MHz	1333 MHz	N/A	1333 MHz	1333 MHz	N/A
64 GB/8R/LRDIMM	N/A	N/A	N/A	N/A	N/A	N/A

■ The only supported DIMM configurations are shown in *Table 5 on page 14*. The DIMMs are sold in matched pairs, which must be installed in pairs shown in the tables. Switching out one of the DIMMs within the matched pair will lead to memory errors.

■ The B460 M4 server needs at least one two-DIMM kit installed for each CPU.

■ DIMMs sold as kits are matched pairs and must remain together when installed in a particular pair of same-colored (blue, black, or white/ivory) slots.

■ Memory DIMMs must be installed evenly across the installed CPUs.

■ Do not mix RDIMMs and LRDIMMs.

■ Your selected CPU(s) can have some effect on performance. The CPUs must be of the same type.

■ For DIMM size mixing rules, see *Table 24 on page 44*.

STEP 4 CHOOSE HARD DISK DRIVES (HDDs) or SOLID-STATE DRIVES (SSDs)

The standard disk drive features are:

- Small form factor (SFF) HDDs or SSDs
- Hot-pluggable
- Sled-mounted

Choose Drives

The available drives are listed in *Table 9*.

Table 9 Available Hot-Pluggable Sled-Mounted HDDs or SSDs

Product ID (PID)	PID Description	Drive Type	Capacity
HDDs			
UCS-HD12T10KS2-E	1.2 TB 6G SAS 10K RPM HDD	SAS	1.2 TB
UCS-HDD900GI2F106	900 GB 6G SAS 10K RPM HDD	SAS	900 GB
UCS-HD600G15KS2-E	600 GB SAS 15K RPM SFF HDD	SAS	600 GB
A03-D600GA2	600 GB 6G SAS 10K RPM HDD	SAS	600 GB
UCS-HD450G15KS2-E	450 GB SAS 15K RPM SFF HDD	SAS	450 GB
UCS-HDD300GI2F105	300 GB 6G SAS 15K RPM HDD	SAS	300 GB
A03-D300GA2	300 GB 6G SAS 10K RPM HDD	SAS	300 GB
SSDs			
UCS-SD800G0KS2-EP	800 GB Enterprise Performance 6G SAS SSD	SAS	800 GB
UCS-SD400G0KS2-EP	400 GB Enterprise Performance 6G SAS SSD	SAS	400 GB
UCS-SD200G0KS2-EP	200 GB Enterprise Performance 6G SAS SSD	SAS	200 GB
UCS-SD480G0KS2-EV	480 GB Enterprise Value 6G SATA SSD	SATA	480 GB
UCS-SD120G0KS2-EV	120 GB Enterprise Value 6G SATA SSD	SATA	120 GB

Approved Configurations

(1) Zero to Four Drives

- Select from 0 to 4 drives from *Table 9*. You can select up to 2 drives per Blade Module.

Caveats

- HDDs and SSDs can be mixed in the same server. HDDs and SSDs cannot be mixed within the Blade Module. SAS SSD and SATA SSD can be mixed within the same Blade Module. See STEP 5 CHOOSE RAID CONFIGURATION, page 20 for available RAID configurations.

STEP 5   CHOOSE RAID CONFIGURATION

The B460 M4 chassis integrates the LSI SAS3008 12G SAS RAID controller (one in each Blade Module), which provides RAID 0/1 capability.

Caveats

- For each Blade Module, RAID configuration is possible if you have two identical drives. Otherwise, a JBOD configuration is supported.

- A RAID configuration cannot be built with drives residing in different Blade Modules.

Cisco UCS B460 M4 Blade Server

STEP 6   CHOOSE ADAPTERS

The adapter offerings are:

■   Cisco Virtual Interface Cards (VICs)

Cisco developed 1200 Series and 1300 Series Virtual Interface Cards (VICs) to provide flexibility to create multiple NIC and HBA devices. The VICs also support adapter Fabric Extender and Virtual Machine Fabric Extender technologies. The VIC features are listed here:

— 1200 Series VICs enable advanced networking features including Netflow for network statistics, and DPDK, USNIC for low-latency computing applications.

— 1300 Series VICs include all of the 1200 Series features plus additional enhancements including network overlay offload support for NVGRE and VXLAN, and RoCE services.

— In addition, 1300 Series VICs support PCIe Gen 3.0 for greater bandwidth than 1200 Series VICs

— Two Converged Network Adapter (CNA) ports, supporting both Ethernet and FCoE

— Delivers 80 Gbps total I/O throughput to the server

  • VIC 1240 supports dual 4 x 10 Gbps Unified I/O ports

  • VIC 1340 supports dual 4x 10 Gbps Unified I/O ports or 2x40 (native) Gbps Unified I/O ports

— Creates up to 256 fully functional unique and independent PCIe adapters and interfaces (NICs or HBAs) without requiring single-root I/O virtualization (SR-IOV) support from operating systems or hypervisors

— Provides virtual machine visibility from the physical network and a consistent network operations model for physical and virtual servers

— Supports customer requirements for a wide range of operating systems and hypervisors

■   Cisco UCS Storage Accelerator Adapters

Cisco UCS Storage Accelerator adapters are designed specifically for the Cisco UCS B-series M4 blade servers and integrate seamlessly to allow improvement in performance and relief of I/O bottlenecks.

NOTE: For environments with 6100 Series Fabric Interconnects, you must configure only the VIC 1240/1280 adapters (1200 Series) and not 1340/1380 (1300 Series). From an I/O connectivity standpoint, configure only the VIC 1200 Series with the 6100 Series Fabric Interconnects.

NOTE: There are three slots on the server. One is a dedicated slot for the VIC 1340/1240 adapter only and the other two accommodate Cisco adapters or Cisco Storage Accelerator adapters as well as other options. *Table 10* shows which adapters plug into each of the three slots. Only the VIC 1340 or 1240 adapter plugs into the VIC 1340/1240 adapter slot. All other adapters plug into the other two mezzanine adapter slots.

NOTE: You must have each B260 M4 configured with 2 CPUs to support cards that plug into either of the two mezzanine connectors. The VIC 1340 and 1240 adapters are supported on both 1- and 2-CPU configured systems.

Table 10 shows the supported adapters.

To help ensure that your operating system is compatible with the cards you have selected, please check the Hardware Compatibility List at this URL:

http://www.cisco.com/en/US/products/ps10477/prod_technical_reference_list.html

Choose an Adapter

The supported mezzanine adapters in each UCS B260 M4 are listed in *Table 10*.

Table 10 Supported Mezzanine Adapters

Product ID (PID)	PID Description	Connector
Virtual Interface Cards (VICs)		
UCSB-MLOM-40G-03[1]	Cisco UCS VIC 1340 modular LOM for blade servers	Adapter 1
UCSB-VIC-M83-8P[1]	Cisco UCS VIC 1380 mezzanine adapter	Adapter 3
UCSB-MLOM-40G-01[2]	Cisco UCS VIC 1240 modular LOM for blade servers	Adapter 1
UCS-VIC-M82-8P[2]	Cisco UCS VIC 1280 mezzanine adapter	Adapter 3
Cisco Storage Accelerators[3]		
UCSB-F-FIO-1600MS	UCS 1600 GB Fusion ioMemory3 SX Scale line for B-Series	Adapter 2 or Adapter 3
UCSB-F-FIO-1300MP	UCS 1300 GB Fusion ioMemory3 PX Performance line for B-Series	Adapter 2 or Adapter 3
UCSB-F-FIO-365M	Cisco UCS 365 GB MLC Fusion-io ioDrive2	Adapter 2 or Adapter 3
UCSB-F-FIO-785M	Cisco UCS 785GB MLC Fusion-io ioDrive2	Adapter 2 or Adapter 3
UCSB-F-LSI-400S	LSI 400GB SLC WarpDrive[4]	Adapter 2 or Adapter 3
Port Expander Card for VIC Option		
UCSB-MLOM-PT-01	Cisco UCS Port Expander Card for VIC. This is a hardware option to enable an additional 4 ports of the VIC 1340 or VIC 1240, bringing the total capability of the VIC 1340 or VIC 1240 to dual 4 x 10 GbE	Adapter 2

Notes . . .

1. The VIC 1340/1380 are only supported with the 6200 Series Fabric Interconnects. They are not supported with the 6100 Series Fabric Interconnects.
2. The VIC 1240/1280 are supported with both the 6200 and 6100 Series Fabric Interconnects.
3. Do not mix Fusion io storage accelerator families. That is, do not mix "MP" or "MS" (ioMemory3) with "M" (ioDrive2) family cards.
4. The LSI 400 GB SLC WarpDrive has reached End of Sale status, but is still supported

"Adapter 1," "Adapter 2," and "Adapter 3" refer to the UCSM naming convention for the adapter slots (this document uses the UCSM naming convention). In the server BIOS and on the motherboard, the corresponding slots are labeled as "mLOM," "Mezz 1," and "Mezz 2,"

respectively. See *Table 11*.

Table 11 Adapter Slot Naming and Bandwidth

Server BIOS and Motherboard Slot Naming	UCSM Slot Naming	Available Bandwidth
mLOM (VIC 1240 or VIC 1340 only)	Adapter 1	20 Gbps per Fabric Extender
Mezz1	Adapter 2	20 Gbps per Fabric Extender
Mezz2	Adapter 3	40 Gbps per Fabric Extender

Supported Configurations

Table 12 and *Table 13* shows the supported adapter combinations. The configuration rules for each B260 M4 are summarized as follows:

■ Adapter slot 1 is dedicated for the VIC 1240 or VIC 1340 only. No other mezzanine card can fit in Adapter Slot 1.

■ The Port Expander Card can only be selected if the VIC 1240 or VIC 1340 is also selected for the server.

■ You must select at least one VIC or CNA. You may select up to two VICs or CNAs. However, you cannot mix a VIC and a CNA in the same server.

■ You cannot select more than one VIC 1240 or VIC 1340. You cannot select more than one VIC 1280 or VIC 1380. A VIC 1240 and a VIC 1280 can be mixed in the same server. A VIC 1340 and VIC1380 can also be mixed.

■ You can select up to two Storage Acceleration adapters. A Fusion-io adapter cannot be mixed with an LSI WarpDrive adapter in the same server.

Select an adapter combination according to *Table 12* or *Table 13*.

NOTE: CPU 1 controls adapter slot 1, and CPU 2 controls adapter slots 2 and 3.

Table 12 Supported 1340 and 1380 Adapter[1] Combinations (for each B260 M4 blade)

Adapter Configurations			Fabric Extenders Aggregate Bandwidth			Fabric Interconnects		CPUs Required
Adapter Slot 1	Adapter Slot 2	Adapter Slot 3	2 x 2208XP	2 x 2204XP	2 x 2104XP[2]	2 x 61xx[2]	2 x 62xx	
Two VICs (VIC 1340 + VIC 1380)								
VIC 1340	Port Expander Card	VIC 1380	120 Gb/s	60 Gb/s	not supported	not supported	62xx	2
VIC 1340	Cisco UCS Storage Accelerator (Fusion-io or LSI)	VIC 1380	80 Gb/s	40 Gb/s	not supported	not supported	62xx	2
VIC 1340	Not populated	VIC 1380	80 Gb/s	40 Gb/s	not supported	not supported	62xx	2
One VIC (VIC 1380)								
Not populated	Cisco UCS Storage Accelerator (Fusion-io or LSI)	VIC 1380	40 Gb/s	20 Gb/s	not supported	not supported	62xx	2
Not populated	Not populated	VIC 1380	40 Gb/s	20 Gb/s	not supported	not supported	62xx	2
One VIC (VIC 1340)								
VIC 1340	Port Expander Card	Cisco UCS Storage Accelerator (Fusion-io or LSI)	80 Gb/s	40 Gb/s	not supported	not supported	62xx	2
VIC 1340	Port Expander Card	Not populated	80 Gb/s	40 Gb/s	not supported	not supported	62xx	2

Table 12 Supported 1340 and 1380 Adapter[1] Combinations (for each B260 M4 blade) *(continued)*

Adapter Configurations			Fabric Extenders Aggregate Bandwidth			Fabric Interconnects		CPUs Required
Adapter Slot 1	Adapter Slot 2	Adapter Slot 3	2 x 2208XP	2 x 2204XP	2 x 2104XP[2]	2 x 61xx[2]	2 x 62xx	
Note: for the following configuration, do not mix a Fusion-io adapter with an LSI WarpDrive. Slots 2 and 3 must have identical types of storage cards.								
VIC 1340	Cisco UCS Storage Accelerator (Fusion-io or LSI)	Cisco UCS Storage Accelerator (Fusion-io or LSI)	40 Gb/s	20 Gb/s	not supported	not supported	62xx	2
VIC 1340	Cisco UCS Storage Accelerator (Fusion-io or LSI)	Not populated	40 Gb/s	20 Gb/s	not supported	not supported	62xx	2
VIC 1340	Not populated	Not populated	40 Gb/s	20 Gb/s	not supported	not supported	62xx	1

Notes . . .

1. In the server BIOS and on the motherboard, "Adapter 1," "Adapter 2," and "Adapter 3" are labeled as "mLOM," "Mezz 1," and "Mezz 2," respectively
2. Supported only through UCS Manager version 2.2(3a) and later.

Table 13 Supported 1240 and 1280 Adapter[1] Combinations (for each B260 M4 blade)

Adapter Configurations			Fabric Extenders Aggregate Bandwidth			Fabric Interconnects		CPUs Required
Adapter Slot 1	Adapter Slot 2	Adapter Slot 3	2 x 2208XP	2 x 2204XP	2 x 2104XP[2]	2 x 61xx[2]	2 x 62xx	
Two VICs (VIC 1240 + VIC 1280)								
VIC 1240	Port Expander Card	VIC 1280	120 Gb/s	60 Gb/s	30 Gb/s	61xx[2]	62xx	2
VIC 1240	Cisco UCS Storage Accelerator (Fusion-io or LSI)	VIC 1280	80 Gb/s	40 Gb/s	20 Gb/s	61xx[2]	62xx	2
VIC 1240	Not populated	VIC 1280	80 Gb/s	40 Gb/s	20 Gb/s	61xx[2]	62xx	2
One VIC (VIC 1280)								
Not populated	Cisco UCS Storage Accelerator (Fusion-io or LSI)	VIC 1280	40 Gb/s	20 Gb/s	20 Gb/s	61xx[2]	62xx	2

Table 13 Supported 1240 and 1280 Adapter[1] Combinations (for each B260 M4 blade) *(continued)*

Adapter Configurations			Fabric Extenders Aggregate Bandwidth			Fabric Interconnects		CPUs Required
Adapter Slot 1	Adapter Slot 2	Adapter Slot 3	2 x 2208XP	2 x 2204XP	2 x 2104XP[2]	2 x 61xx[2]	2 x 62xx	
Not populated	Not populated	VIC 1280	40 Gb/s	20 Gb/s	20 Gb/s	61xx[2]	62xx	2
One VIC (VIC 1240)								
VIC 1240	Port Expander Card	Cisco UCS Storage Accelerator (Fusion-io or LSI)	80 Gb/s	40 Gb/s	20 Gb/s	61xx[2]	62xx	2
VIC 1240	Port Expander Card	Not populated	80 Gb/s	40 Gb/s	20 Gb/s	61xx[2]	62xx	2
Note: for the following configuration, do not mix a Fusion-io adapter with an LSI WarpDrive. Slots 2 and 3 must have identical types of storage cards.								
VIC 1240	Cisco UCS Storage Accelerator (Fusion-io or LSI)	Cisco UCS Storage Accelerator (Fusion-io or LSI)	40 Gb/s	20 Gb/s	20 Gb/s	61xx[2]	62xx	2
VIC 1240	Cisco UCS Storage Accelerator (Fusion-io or LSI)	Not populated	40 Gb/s	20 Gb/s	20 Gb/s	61xx[2]	62xx	2
VIC 1240	Not populated	Not populated	40 Gb/s	20 Gb/s	20 Gb/s	61xx[2]	62xx	1

Notes . . .

1. In the server BIOS and on the motherboard, "Adapter 1," "Adapter 2," and "Adapter 3" are labeled as "mLOM," "Mezz 1," and "Mezz 2," respectively
2. Supported only through UCS Manager version 2.2(3a) and later.

To check that your operating system is compatible with the adapter you have selected, please check the Hardware Compatibility List at this URL

http://www.cisco.com/en/US/products/ps10477/prod_technical_reference_list.html

STEP 7 ORDER A TRUSTED PLATFORM MODULE (OPTIONAL)

Trusted Platform Module (TPM) is a computer chip (microcontroller) that can securely store artifacts used to authenticate the platform (server). These artifacts can include passwords, certificates, or encryption keys. A TPM can also be used to store platform measurements that help ensure that the platform remains trustworthy. Authentication (ensuring that the platform can prove that it is what it claims to be) and attestation (a process helping to prove that a platform is trustworthy and has not been breached) are necessary steps to ensure safer computing in all environments.

The TPM ordering information is listed in *Table 14*.

Table 14   Trusted Platform Module

Product ID (PID)	PID Description
UCSX-TPM1-001	Trusted Platform Module

NOTE: The B460 M4 requires two TPMs, one in each of the two Blade Modules.

NOTE: The module used in this server conforms to TPM v1.2/1.3, as defined by the Trusted Computing Group (TCG).

STEP 8 ORDER OPTIONAL KVM CABLE

The KVM cable provides a connection into the server, providing a DB9 serial connector, a VGA connector for a monitor, and dual USB 2.0 ports for a keyboard and mouse. With this cable, you can create a direct connection to the operating system and the BIOS running on the server.
> **NOTE**: You can connect only one KVM cable to the B460 M4, and it must be connected to the lower (master) chassis only.

The KVM cable ordering information is listed in *Table 15*.

Table 15 KVM Cable

Product ID (PID)	PID Description
37-1016-01	KVM Cable

Figure 4   KVM Cable

1	Connector (to server front panel)	3	VGA connector (for a monitor)
2	DB-9 serial connector	4	Two-port USB 2.0 connector (for a mouse and keyboard)

STEP 9 CHOOSE OPERATING SYSTEM AND VALUE-ADDED SOFTWARE

Several operating systems and value-added software programs are available. Select as desired from *Table 16*.

Table 16 OSs and Value-Added Software (for 4-CPU servers)

PID Description	Product ID (PID)
Microsoft Windows Server	
MSWS-12-ST2S	Windows Server 2012 Standard (2 CPU/2 VMs)
MSWS-12-DC2S	Windows Server 2012 Datacenter (2 CPU/Unlimited VMs)
MSWS-12-ST2S-NS	Windows Server 2012 Standard (2 CPU/2 VMs) No Cisco Svc
MSWS-12-DC2S-NS	Windows Server 2012 Datacenter (2 CPU/Unlim VM) No Cisco Svc
MSWS-12R2-ST2S	Windows Server 2012 R2 Standard (2 CPU/2 VMs)
MSWS-12R2-DC2S	Windows Server 2012 R2 Datacenter (2 CPU/Unlimited VMs)
MSWS-12R2-ST2S-NS	Windows Server 2012 R2 Standard (2 CPU/2 VMs) No Cisco SVC
MSWS-12R2-DC2S-NS	Windows Server 2012 R2 Datacen (2 CPU/Unlim VM) No Cisco Svc
SUSE	
SLES-SVR-2S-1G-1A	SUSE Linux Enterprise Srvr (1-2 CPU,1 Phys);1yr Support Reqd

RHEL-SFS-2S-3A	RHEL Option/Scalable File System/2 Socket/1 Yr Svcs Required
Nexus 1000V for Hyper-V and vSphere	
N1K-VSG-UCS-BUN	Over half off N1K and VSG w/ purchase of UCS B/C Series
N1K-VLEM-UCS-1	Nexus 1000V License Paper Delivery (1 CPU) for bundles
VSG-VLEM-UCS-1	VSG License Paper Delivery (1 CPU) for bundles
UCS Director	
CUIC-PHY-SERV-BM-U	Cisco Cloupia Resource Lic - One Phy Server node bare metal
CUIC-PHY-SERV-U	Cisco Cloupia Resource Lic - One physical Server node
CUIC-TERM	Acceptance of Cisco Cloupia License Terms
UCS Performance Manager	
UCS-PM-IE	UCS Performance Manager
UCS-PM-EE	UCS Performance Manager Express
EVAL-UCS-PM-IE	UCS Performance Manager - 60 days evaluation
EVAL-UCS-PM-EE	UCS Performance Manager Express - 60 days evaluation
NFR-UCS-PM-IE	UCS Performance Manager - Not For Resale
NFR-UCS-PM-EE	CS Performance Manager Express - Not For Resale
IMC Supervisor	
EVAL-CIMC-SUP	EVAL: IMC Supervisor-Branch Mgt SW for C/E-Series - 50 Svrs
EVAL-CIMC-SUP-BAS	EVAL: IMC Supervisor One-time Site Installation License
CIMC-SUP-B01	IMC Supervisor-Branch Mgt SW for C-Series & E-Series up to 100 Svrs
CIMC-SUP-B02	IMC Supervisor- Branch Mgt SW for C-Series & E-Series up to 250 Svrs
CIMC-SUP-B10	IMC Supervisor- Branch Mgt SW for C-Series & E-Series up to 1K Svrs
CIMC-SUP-BASE-K9	IMC Supervisor One-time Site Installation License
CIMC-SUP-TERM	Acceptance of Cisco IMC Supervisor License Terms
VMWare 5	
VMW-VS5-STD-1A	VMware vSphere 5 Standard for 1 Processor, 1 Year, Support Rqd
VMW-VS5-STD-2A	VMware vSphere 5 Standard for 1 Processor, 2 Year, Support Rqd

Table 16 OSs and Value-Added Software (for 4-CPU servers) *(continued)*

PID Description	Product ID (PID)
VMW-VS5-STD-3A	VMware vSphere 5 Standard for 1 Processor, 3 Year, Support Rqd
VMW-VS5-STD-4A	VMware vSphere 5 Standard for 1 Processor, 4 Year, Support Rqd
VMW-VS5-STD-5A	VMware vSphere 5 Standard for 1 Processor, 5 Year, Support Rqd
VMW-VS5-ENT-1A	VMware vSphere 5 Enterprise for 1 Processor, 1 Year Support Rqd
VMW-VS5-ENT-2A	VMware vSphere 5 Enterprise for 1 CPU, 2 Yr Support Rqd
VMW-VS5-ENT-3A	VMware vSphere 5 Enterprise for 1 CPU, 3 Yr Support Rqd
VMW-VS5-ENT-4A	VMware vSphere 5 Enterprise for 1 Processor, 4 Year Support Rqd
VMW-VS5-ENT-5A	VMware vSphere 5 Enterprise for 1 CPU, 5 Yr Support Rqd
VMW-VS5-ENTP-1A	VMware vSphere 5 Enterprise Plus for 1 Processor, 1 Year Support Rqd
VMW-VS5-ENTP-2A	VMware vSphere 5 Enterprise Plus for 1 CPU, 2 Yr Support Rqd
VMW-VS5-ENTP-3A	VMware vSphere 5 Enterprise Plus for 1 Processor, 3 Year Support Rqd
VMW-VS5-ENTP-4A	VMware vSphere 5 Enterprise Plus for 1 Processor, 4 Year Support Rqd
VMW-VC5-STD-1A	VMware vCenter 5 Server Standard, 1 yr support required
VMW-VC5-STD-2A	VMware vCenter 5 Server Standard, 2 yr support required
VMW-VC5-STD-3A	VMware vCenter 5 Server Standard, 3 yr support required
VMW-VC5-STD-4A	VMware vCenter 5 Server Standard, 4 yr support required
VMW-VC5-STD-5A	VMware vCenter 5 Server Standard, 5 yr support required

Cisco UCS B460 M4 Blade Server

STEP 10 CHOOSE OPERATING SYSTEM MEDIA KIT

Choose the optional operating system media listed in *Table 17*.

Table 17   OS Media

Product ID (PID)	PID Description
RHEL-6	RHEL 6 Recovery Media Only (Multilingual)
SLES-11	SLES 11 media only (multilingual)
MSWS-08R2-STHV-RM	Windows Svr 2008 R2 ST (1-4CPU, 5CAL), Media
MSWS-08RS-ENHV-RM	Windows Svr 2008 R2 EN (1-8CPU, 25CAL), Media
MSWS-08R2-DCHV-RM	Windows Svr 2008 R2 DC (1-8CPU, 25CAL), Media
MSWS-12-ST2S-RM	Windows Server 2012 Standard (2 CPU/2 VMs) Recovery Media
MSWS-12-DC2S-RM	Windows Server 2012 Datacenter (2 CPU/Unlimited VM) Rec Media
MSWS-12R2-ST2S-RM	Windows Server 2012 R2 Standard (2 CPU/2 VMs) Recovery Media
MSWS-12R2-DC2S-RM	Windows Server 2012 R2 Datacen(2 CPU/Unlimited VM) Rec Media

STEP 11 CHOOSE SERVICE and SUPPORT LEVEL

A variety of service options are available, as described in this section.

NOTE: Because the B460 M4 server is structurally two Scalable M4 Blade Modules connected by means of the Scalability Connector, separate support for each of the two Scalable M4 Blade Modules in the B460 M4 server configuration is automatically purchased when you order support for the B460 M4 server. The online ordering tool enforces that the service level is always the same (for example, SNTP) for both Scalable M4 Blade Modules. If you change the service level, the new service level is applied to both Scalable M4 Blade Modules so that they remain the same.

In addition, there are no separate, single-support SKUs for the B460 M4 server or for the Scalability Connector.

Unified Computing Warranty, No Contract

If you have noncritical implementations and choose to have no service contract, the following coverage is supplied:

■ Three-year parts coverage.

■ Next business day (NBD) onsite parts replacement eight hours a day, five days a week.

■ 90-day software warranty on media.

■ Ongoing downloads of BIOS, drivers, and firmware updates.

■ UCSM updates for systems with Unified Computing System Manager. These updates include minor enhancements and bug fixes that are designed to maintain the compliance of UCSM with published specifications, release notes, and industry standards.

SMARTnet for UCS

For support of the entire Unified Computing System, Cisco offers the Cisco SMARTnet for UCS Service. This service provides expert software and hardware support to help sustain performance and high availability of the unified computing environment. Access to Cisco Technical Assistance Center (TAC) is provided around the clock, from anywhere in the world.

For UCS blade servers, there is Smart Call Home, which provides proactive, embedded diagnostics and real-time alerts. For systems that include Unified Computing System Manager, the support service includes downloads of UCSM upgrades. The Cisco SMARTnet for UCS Service includes flexible hardware replacement options, including replacement in as little as two hours. There is also access to Cisco's extensive online technical resources to help maintain optimal efficiency and uptime of the unified computing environment. You can choose a desired service listed in Table 18.

Table 18   Cisco SMARTnet for UCS Service

Service SKU	On Site?	Description

CON-SNT-B260M4	No	SMARTNET 8X5XNBD UCS Blade Module for B260/B460 M4

SMARTnet for UCS Hardware Only Service

For faster parts replacement than is provided with the standard Cisco Unified Computing System warranty, Cisco offers the Cisco SMARTnet for UCS Hardware Only Service. You can choose from two levels of advanced onsite parts replacement coverage in as little as four hours. SMARTnet for UCS Hardware Only Service provides remote access any time to Cisco support professionals who can determine if a return materials authorization (RMA) is required. You can choose a service listed in Table 19.

Table 19   SMARTnet for UCS Hardware Only Service

Unified Computing Partner Support Service

Cisco Partner Support Service (PSS) is a Cisco Collaborative Services service offering that is designed for partners to deliver their own branded support and managed services to enterprise customers. Cisco PSS provides partners with access to Cisco's support infrastructure and assets to help them:

■ Expand their service portfolios to support the most complex network environments

■ Lower delivery costs

■ Deliver services that increase customer loyalty

Partner Unified Computing Support Options enable eligible Cisco partners to develop and consistently deliver high-value technical support that capitalizes on Cisco intellectual assets. This helps partners to realize higher margins and expand their practice.

Partner Unified Computing Support Options are available to Cisco PSS partners. For additional information, see the following URL:

www.cisco.com/go/partnerucssupport

The two Partner Unified Computing Support Options include:

■ Partner Support Service for UCS

■ Partner Support Service for UCS Hardware Only

Partner Support Service for UCS provides hardware and software support, including triage support for third party software, backed by Cisco technical resources and level three support. See *Table 20*.

Cisco Combined Services

Combined Services makes it easier to purchase and manage required services under one contract. SMARTnet services for UCS help increase the availability of your vital data center infrastructure and realize the most value from your unified computing investment. The more benefits you realize from the Cisco Unified Computing System (Cisco UCS), the more important the technology becomes to your business. These services allow you to:

■ Optimize the uptime, performance, and efficiency of your UCS

■ Protect your vital business applications by rapidly identifying and addressing issues

■ Strengthen in-house expertise through knowledge transfer and mentoring

■ Improve operational efficiency by allowing UCS experts to augment your internal staff resources

■ Enhance business agility by diagnosing potential issues before they affect your operations

Unified Computing Drive Retention Service

With the Cisco Unified Computing Drive Retention (UCDR) Service, you can obtain a new disk drive in exchange for a faulty drive without returning the faulty drive. In exchange for a Cisco replacement drive, you provide a signed Certificate of Destruction (CoD) confirming that the drive has been removed from the system listed, is no longer in service, and has been destroyed.

Sophisticated data recovery techniques have made classified, proprietary, and confidential information vulnerable, even on malfunctioning disk drives. The UCDR service enables you to retain your drives and ensures that the sensitive data on those drives is not compromised, which reduces the risk of any potential liabilities. This service also enables you to comply with regulatory, local, and federal requirements.

If your company has a need to control confidential, classified, sensitive, or proprietary data, you might want to consider one of the Drive Retention Services listed in *Table 22*, *Table 23*, or *Table 24*.

NOTE: Cisco does not offer a certified drive destruction service as part of this service.

SUPPLEMENTAL MATERIAL

Motherboard

The top view of one of the two Blade Modules with the cover removed is shown in *Figure 5*. The B460 M4 consists of two Blade Modules connected by a Scalability Connector.

Figure 5   Top view of one of the two Blade Modules for B460 M4 (cover off)
A drawing of the top view of one of the two Blade Modules for B460 M4 with the cover removed is shown in Figure *Figure 5*.

Figure 6   Top view of one of the two Blade Modules for B460 M4 (cover off)

Cisco UCS B460 M4 Blade Server

1	Drive bay 1	15	Memory buffer for subchannels G and H
2	Drive bay 2	16	Memory buffer for subchannels I and J
3	UCS scalability terminator	17	DIMM slots I1-I3 and J1-J3
4	CMOS battery	18	DIMM slots N1-N3 and M1-M3
5	CPU 1 (under heat sink)	19	Memory buffer for subchannels M and N
6	CPU 2 (under heat sink)	20	Memory buffer for subchannels I and J
7	Trusted Platform Module (TPM)	21	DIMM slots K1-K3 and L1-L3
8	Memory buffer for subchannels A and B	22	DIMM slots O1-O3 and P1-P3
9	DIMM slots A1-A3 and B1-B3	23	Memory buffer for subchannels O and P
10	DIMM slots C1-C3 and D1-D3	24	mLOM card This slot is shown in Cisco UCS manager as "Adapter 1" but the BIOS lists it as "mLOM." The VIC 1340/1240 is a type of adapter with a specific footprint that can only be used in this slot.
11	Memory buffer for subchannels C and D	25	Adapter card This slot is shown in Cisco UCS manager as "Adapter 2" but the BIOS lists it as "Mezz 1." Mixing adapter types is supported.
12	Memory buffer for subchannels E and F	26	Adapter card This slot is shown in Cisco UCS manager as "Adapter 3" but the BIOS lists it as "Mezz 2." Mixing adapter types is supported.
13	DIMM slots E1-E3 and F1-F3	27	Internal USB connector Cisco UCS-USBFLASH-S-4GB= is recommended (if available to be ordered), but if you use another USB drive it must be no wider than 0.8 inches (20 mm), and no more than 1.345 inches (34 mm) long in order to provide needed clearances to install or remove the USB drive. Third-party USB flash memory is allowed but not subject to support by Cisco and is at the user's risk.
14	DIMM slots G1-G3 and H1-H3	28	Flexible Flash card locations (2)

DIMM and CPU Layout

The DIMM and CPU layout is shown in *Figure 7*.

Figure 7   DIMM and CPU Layout
Each CPU controls four memory channels, and each memory channel controls two subchannels each through individual memory buffers placed around the motherboard (shown as black rectangles on *Figure 7*). Each subchannel controls 3 DIMMs as follows (refer also to *Figure 3 on page 13*):

- CPU 1 subchannels A through H and DIMMs controlled:

    — A1 (blue DIMM slot), A2 (black DIMM slot), A3 (white DIMM slot)

    — B1 (blue DIMM slot), B2 (black DIMM slot), B3 (white DIMM slot)

    — C1 (blue DIMM slot), C2 (black DIMM slot), C3 (ivory DIMM slot)

    — D1 (blue DIMM slot), D2 (black DIMM slot), D3 (ivory DIMM slot)

    — E1 (blue DIMM slot), E2 (black DIMM slot), E3 (ivory DIMM slot)

- — F1 (blue DIMM slot), F2 (black DIMM slot), F3 (ivory DIMM slot)

- — G1 (blue DIMM slot), G2 (black DIMM slot), G3 (ivory DIMM slot)

- — H1 (blue DIMM slot), H2 (black DIMM slot), H3 (ivory DIMM slot)

- CPU 2 subchannels I through P and DIMMs controlled:

  - — I1 (blue DIMM slot), I2 (black DIMM slot), I3 (ivory DIMM slot)

  - — J1 (blue DIMM slot), J2 (black DIMM slot), J3 (ivory DIMM slot)

  - — K1 (blue DIMM slot), K2 (black DIMM slot), K3 (ivory DIMM slot)

  - — L1 (blue DIMM slot), L2 (black DIMM slot), L3 (ivory DIMM slot)

  - — M1 (blue DIMM slot), M2 (black DIMM slot), M3 (ivory DIMM slot)

  - — N1 (blue DIMM slot), N2 (black DIMM slot), N3 (ivory DIMM slot)

  - — O1 (blue DIMM slot), O2 (black DIMM slot), O3 (white DIMM slot)

  - — P1 (blue DIMM slot), P2 (black DIMM slot), P3 (white DIMM slot)

Memory Population Recommendations

See *Table 5 on page 14*. Note that DIMMs in slots of the same color must be electrically paired with each other, and must be populated with identically matched DIMMs that were ordered as a pair. Do not swap a paired DIMM with a DIMM that is not identical in manufacturer part number.

When considering the memory configuration of your server, you should observe the following:

- Your selected CPU(s) can have some effect on performance. All CPUs in the server must be of the same type.

- Performance degradation can result from the following:

  - — Mixing DIMM sizes and densities within a pair is not allowed and both DIMMs in the pair will be logically removed from the memory array

  - — Unevenly populating DIMMs between CPUs

Memory Mixing Guidelines

For the most part, it is recommended that all DIMMs that are installed be of the same type and size. See *Table 25* for guidelines about DIMM installation in the B460 M4 blade and where DIMM sizes can be mixed.

Table 25   DIMM Mixing

Identical DIMMs or Mixed DIMMs	Qty of 2x8GB DIMM kits (UCS-MR-2X082RY-E)	Qty of 2x16GB DIMM kit (UCS-MR-2X162RY-E)	Qty of 2x32GB DIMM kit (UCS-ML-2X324RY-E)	Qty of 2x64GB DIMM kit (UCS-ML-2X648RY-E)	Total Memory Capacity
Mixed	16 (32 DIMMs)	16 (32 DIMMs)			768 GB
Mixed	16 (32 DIMMs)	32 (64 DIMMs)			1280 GB
Mixed	32 (64 DIMMs)	16 (32 DIMMs)			1024 GB
Mixed			16 (32 DIMMs)	16 (32 DIMMs)	3072 GB
Mixed			16 (32 DIMMs)	32 (64 DIMMs)	5120 GB
Mixed			32 (64 DIMMs)	16 (32 DIMMs)	4096 GB

Upgrade and Servicing-Related Parts

This section lists the upgrade and servicing-related parts you may need during the life of your server. Some of these parts are configured with every server or with every UCS 5108 blade server chassis, and some may be ordered when needed or may be ordered and kept on hand as spares for future use. See *Table 26*.

Table 26 Upgrade and Servicing-related Parts for UCS B460 M4 Server

Spare Product ID (PID)	Description
N20-BBLKD=	2.5-inch HDD Blanking Panel[1]
UCSB-HS-01-EX=	CPU Heat Sink for UCS B260 M4 and B460 M4[1]
UCS-CPU-LPCVR=	CPU load plate dust cover (for unpopulated CPU sockets)
N20-MBLIBATT=	Replacement Lithium Battery for Server Motherboard (CR2032)[1]
N20-BKVM=	KVM local IO cable for UCS servers console port[2]
UCS-CPU-EP-PNP=	Pick n place CPU tools for M3/EP and M4/EX CPUs[3]
UCS-CPU-GREASE3=	Thermal grease for M4/EX heat sink seal[3]
UCSX-HSCK=	UCS Processor Heat Sink Cleaning Kit (when replacing a CPU)[3]
UCS-SD-32G-S[4]	32 GB SD card module for UCS servers
UCS-USBFLSH-S-4GB=	4 GB Flash USB drive (shorter)

Notes . . .

1. This part is included/configured with your UCS server (in some cases, as determined by the configuration of your server).
2. This part is included/configured with the UCS 5108 blade server chassis.
3. This part is included with the purchase of each optional or spare CPU processor kit.
4. Only half the capacity of the 32 GB SD card is available in this server.

Drive and Blade Server Blanking Panels

A drive blanking panel (N20-BBLKD=) must be installed if you remove a disk drive from a UCS server. These panels are required to maintain system temperatures at safe operating levels, and to keep dust away from system components.

Replacing a CPU (with CPU heat sink)

Instructions for replacing a CPU and heat sink can be found at the following link:

http://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/hw/blade-servers/B460M4.html

Motherboard Lithium Battery

You can order a replacement motherboard battery. Installation instructions are found at this link:

http://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/hw/blade-servers/B460M4.html

CPU Removal and Installation ("pick n place") Tool Set

The Pick n Place tool set is used to install a CPU in its socket without damage. It must be used each time a CPU is installed in the server.

Instructions for using this tool set are found at the following link:

http://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/hw/blade-servers/B460M4.html

NOTE: When you purchase a spare CPU, the Pick n Place Toolkit is included.

Thermal Grease (with syringe applicator) for CPU to Heatsink Seal

Thermal grease must be applied to the top of the CPU where it comes in contact with the heat sink. Instructions for applying thermal grease are found at:

http://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/hw/blade-servers/B460M4.html

CAUTION:
DO NOT use thermal grease available for purchase at any commercial electronics store. If these instructions are not followed, the CPU may overheat and be destroyed.

NOTE: When you purchase a spare CPU, the thermal grease with syringe applicator is included.

Cisco UCS B460 M4 Blade Server

CPU Heat Sink Cleaning Kit

The cleaning kit is used to remove the existing thermal compound from the bottom of the heat sink during a CPU replacement process. Instructions for cleaning are found at the following link:

http://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/hw/blade-servers/B460M4.html

NOTE: When you purchase a spare CPU, the CPU cleaning kit is included.

Network Connectivity

This section shows how the supported adapter card configurations for each one of the two Blade Modules connecting to the Fabric Extender modules in the 5108 blade server chassis. Recall that the B460 M4 consists of two cross-connected Scalable M4 Blade Modules.

There are three configurable adapter slots on each one of the two Blade Modules for B460 M4. For each Blade Module, one slot supports only the VIC 1340/1240 adapter, and two additional slots can accommodate Cisco adapters, as well as the Storage Accelerator adapters. *Table 12 on page 25* shows supported adapter configurations. You must install at least one VIC or CNA in one of the six adapter slots.

"Adapter 1," "Adapter 2," and "Adapter 3" refer to the UCSM naming convention for the adapter slots (this document uses the UCSM naming convention). In the server BIOS and on the motherboard, the corresponding slots are labeled as "mLOM," "Mezz 1," and "Mezz 2," respectively. See *Table 27*.

Table 27 Adapter Slot Naming and Bandwidth

B460 M4 Blade Module	Server BIOS and Motherboard Slot Naming	UCSM Slot Naming	Available Bandwidth
"Slave" Blade Module (top)	mLOM (VIC 1340/1240 only)	Adapter 1	20 Gbps per Fabric Extender
	Mezz1	Adapter 2	20 Gbps per Fabric Extender
	Mezz2	Adapter 3	40 Gbps per Fabric Extender
"Master" Blade Module (bottom)	mLOM (VIC 1340/1240 only)	Adapter 1	20 Gbps per Fabric Extender
	Mezz1	Adapter 2	20 Gbps per Fabric Extender
	Mezz2	Adapter 3	40 Gbps per Fabric Extender

Total bandwidth is a function of the Fabric Extender, the adapter, and the adapter slot, as shown in *Table 28* and *Table 29*.

Table 28   Maximum Bandwidth Using Dual Fabric Extenders (FEXs)

FEX Model	Maximum Bandwidth Using Dual FEXs
2208XP	160 Gb
2204XP	160 Gb
2104XP	40 Gb

Table 29   Maximum Bandwidth for Each of the Three Adapter Slots

Adapter Slot	Maximum Bandwidth Using Dual FEXs
VIC 1340/1240 (Adapter 1) slot	40 Gb
Adapter 2 Slot	40 Gb
Adapter 3 Slot	80 Gb

Cisco UCS B460 M4 Blade Server

Figure 8 shows the configuration for maximum bandwidth, where the following ports are routed to Fabric Extender Modules A and B inside the 5108 blade server chassis:

- Two 2 x 10G KR ports from the VIC 1340/1240 adapter
- Two 2 x 10G KR ports from the Port Expander
- Two 4 x 10G KR ports from the VIC 1380/1280 adapter

The resulting aggregate bandwidth is 160 Gb (80 Gb to each Fabric Extender).

Figure 8   Scalable M4 Blade Module Connections to the Fabric Extenders
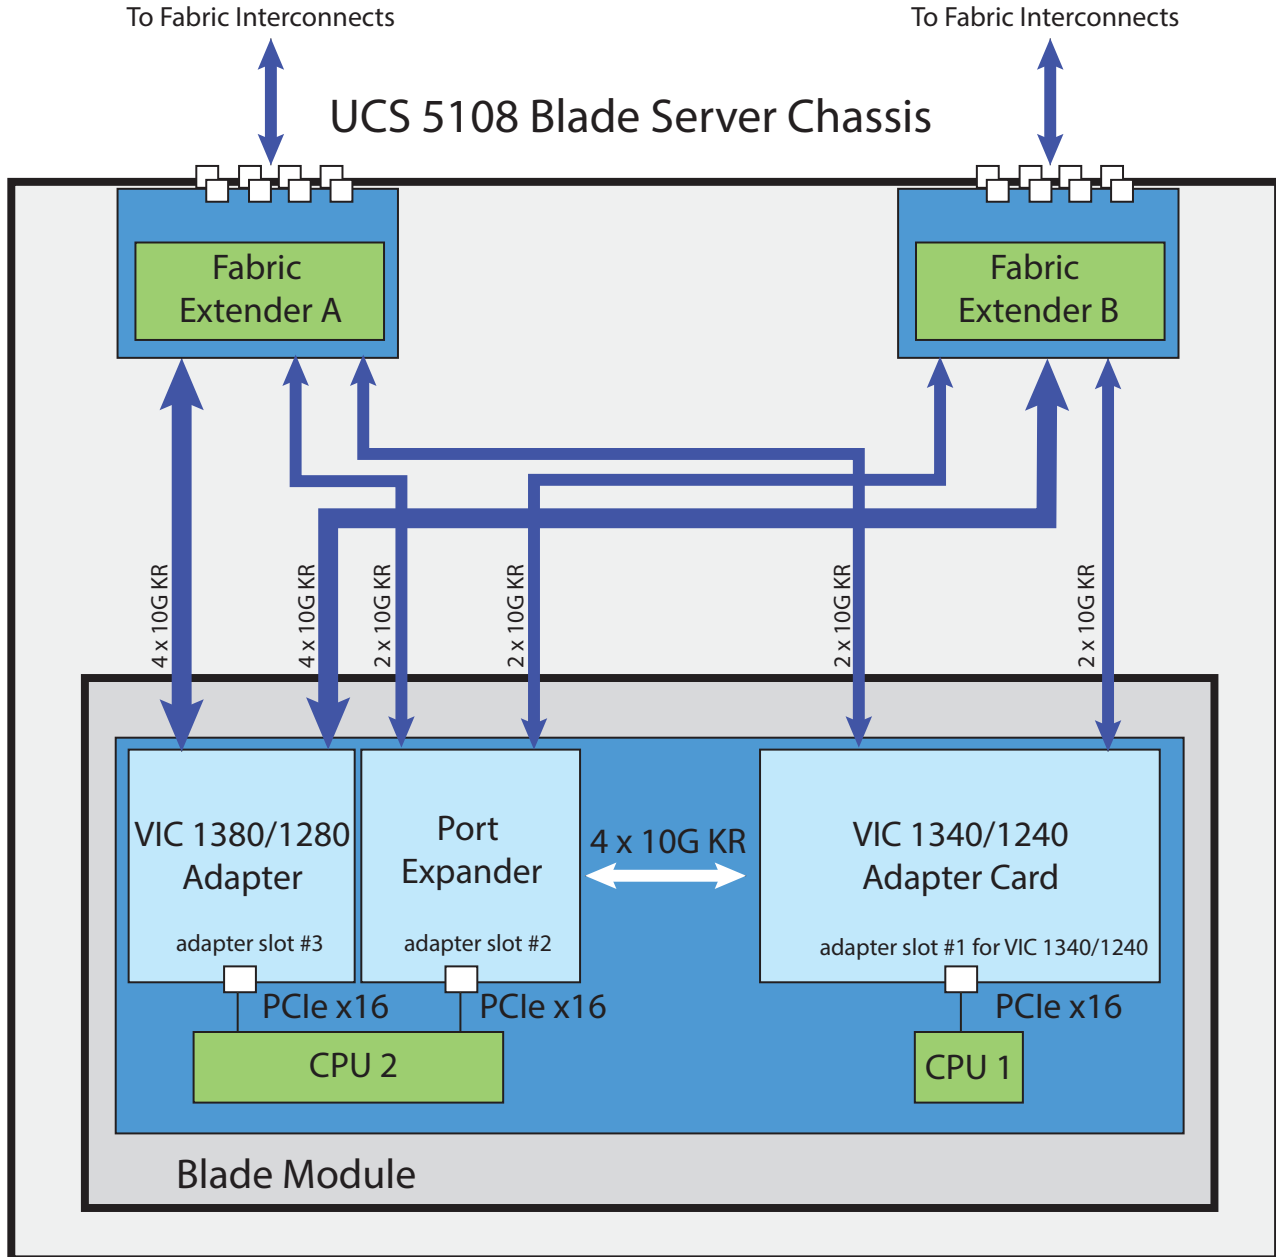

VIC 1340/1240 and Port Expander

Adapter slot 1 is dedicated to the VIC 1340/1240 adapter, and no other adapter card can be installed in this slot. There are two groups of four ports on the VIC 1340/1240:

- Two ports of the first group and two ports of the second group are wired through the UCS 5108 Blade Server chassis to Fabric Extender A and Fabric Extender B.

- The other two ports of each group are wired to adapter slot 2. The VIC 1340/1240 adapter senses the type of adapter installed in adapter slot 2. If a Port Expander is installed in adapter slot 2, the four 10G KR ports between the adapters are used for port expansion; otherwise they are unused.

With the Port Expander installed, there are up to eight (depending on the Fabric Extender installed) 10 Gb network interfaces, as represented in *Figure 9*.

Figure 9   VIC 1340/1240 Connectivity
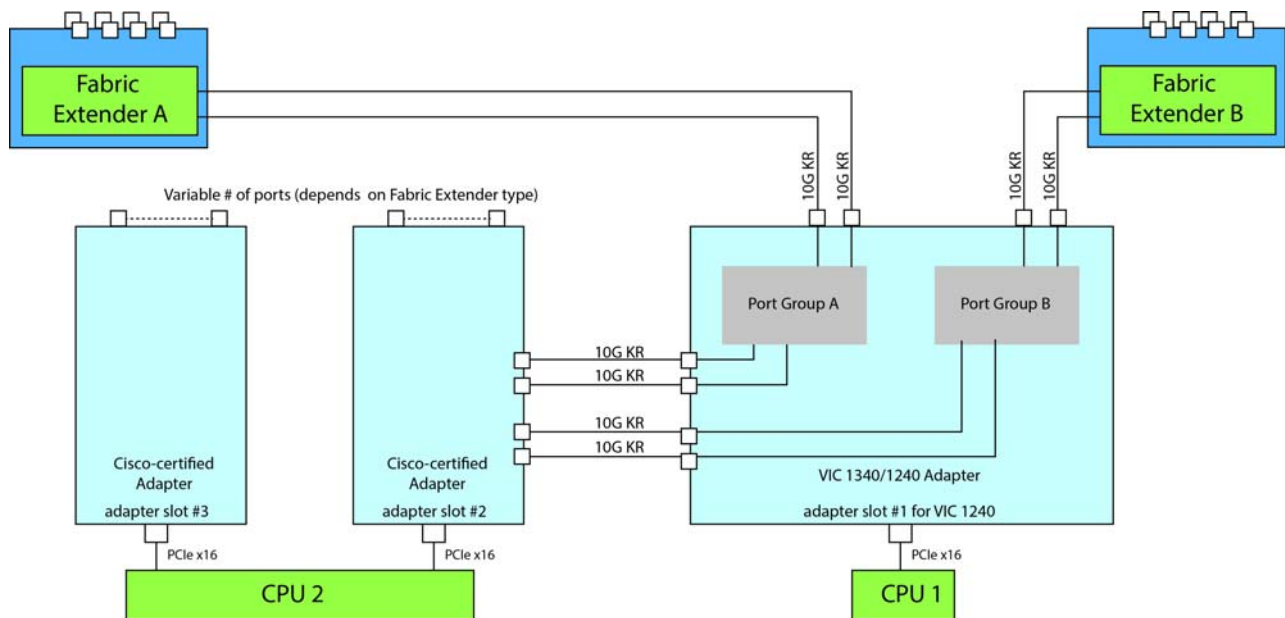

Connectivity Using the Cisco UCS 2208XP/2204XP Fabric Extender

The connectivity options for each of the two Blade Modules shown in *Figure 10* through *Figure 19* are summarized in *Table 30*.

Table 30 Supported Adapter[1] Combinations Using the 2208XP/2204XP FEX

Adapter Slot 1	Adapter Slot 2	Adapter Slot 3	Total Available Bandwidth
			2 x 2208XP or 2 x 2204XP
VIC 1340/1240	Port Expander Card	VIC 1380/1280	160 Gb *Figure 10 on page 52*
VIC 1340/1240	Cisco UCS Storage Accelerator	VIC 1380/1280	120 Gb *Figure 11 on page 52*
VIC 1340/1240	Not populated	VIC 1380/1280	120Gb *Figure 12 on page 53*
Not populated	Cisco UCS Storage Accelerator	VIC 1380/1280	80 Gb *Figure 13 on page 53*
Not populated	Not populated	VIC 1380/1280	80 Gb *Figure 14 on page 54*
VIC 1340/1240	Port Expander Card	Cisco UCS Storage Accelerator	80 Gb *Figure 15 on page 54*
VIC 1340/1240	Port Expander Card	Not populated	80 Gb *Figure 16 on page 55*
Note: for the following configuration, do not mix a Fusion-io adapter with an LSI WarpDrive. Slots 2 and 3 must have identical types of storage cards.			
VIC 1340/1240	Cisco UCS Storage Accelerator	Cisco UCS Storage Accelerator	40 Gb *Figure 17 on page 55*
VIC 1340/1240	Cisco UCS Storage Accelerator	Not populated	40 Gb *Figure 18 on page 56*
VIC 1340/1240	Not populated	Not populated	40 Gb *Figure 19 on page 56*

Notes . . .

1. In the server BIOS and on the motherboard, "Adapter 1," "Adapter 2," and "Adapter 3" are labeled as "mLOM," "Mezz 1," and "Mezz 2," respectively

In *Figure 10*, two ports from the VIC 1340/1240 are channeled to Fabric Extender A and two are channeled to Fabric Extender B. The Port Expander Card installed in adapter slot 2 acts as a pass-through device, channeling two ports to each of the Fabric Extenders. In addition, the VIC 1380/1280 channels four ports to each Fabric Extender. The result is 80 Gb of bandwidth to each Fabric Extender.

Figure 10   VIC 1340/1240, Port Expander in adapter slot 2, and VIC 1380/1280 in adapter slot 3

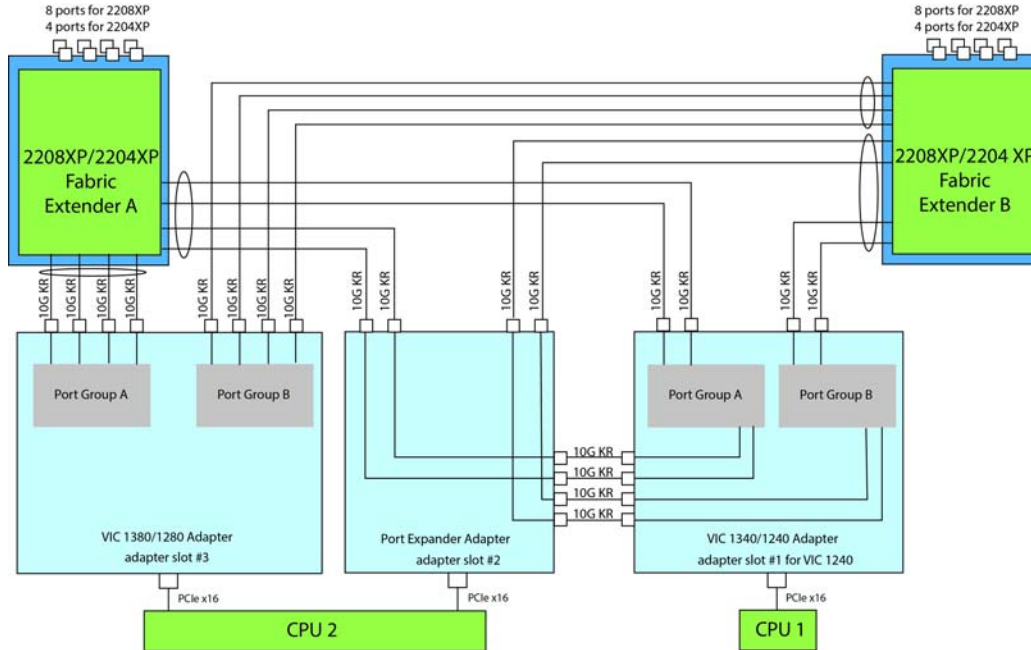

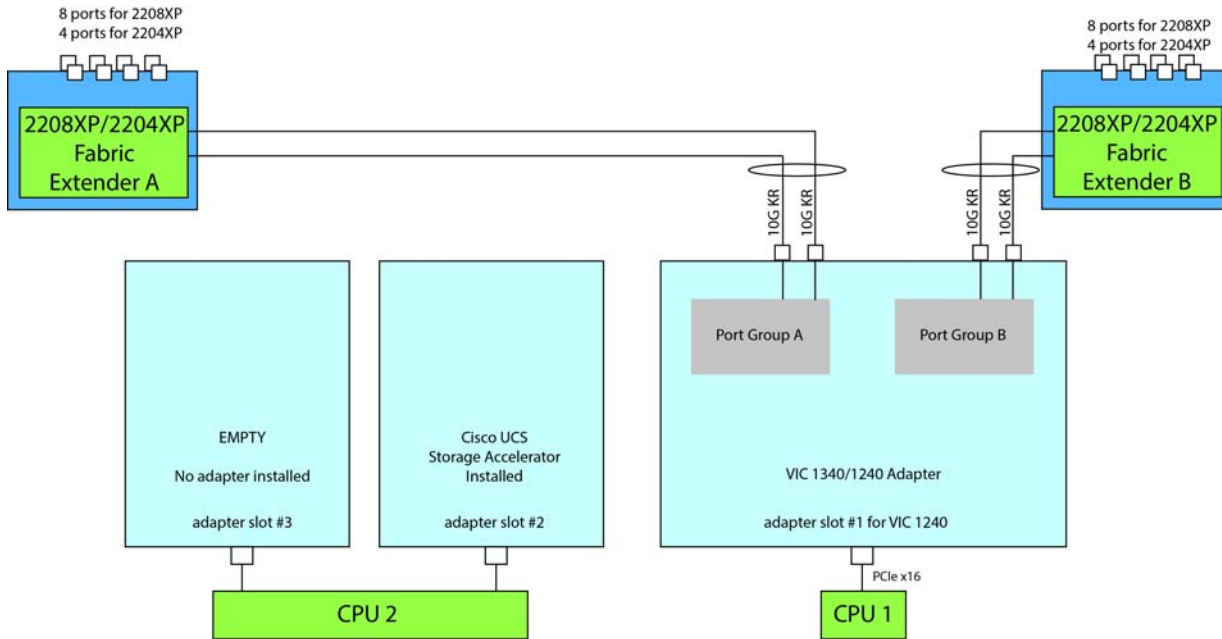

In *Figure 11*, two ports from the VIC 1340/1240 are channeled to Fabric Extender A and two are channeled to Fabric Extender B. A Cisco UCS Storage Accelerator adapter is installed in slot 2, but provides no network connectivity. The VIC 1380/1280 installed in adapter slot 3 channels four ports to each of the Fabric Extenders. The result is 60 Gb of bandwidth to each Fabric Extender.

Figure 11   VIC 1340/1240, Cisco UCS SA in adapter slot 2, and VIC 1380/1280 in adapter slot 3
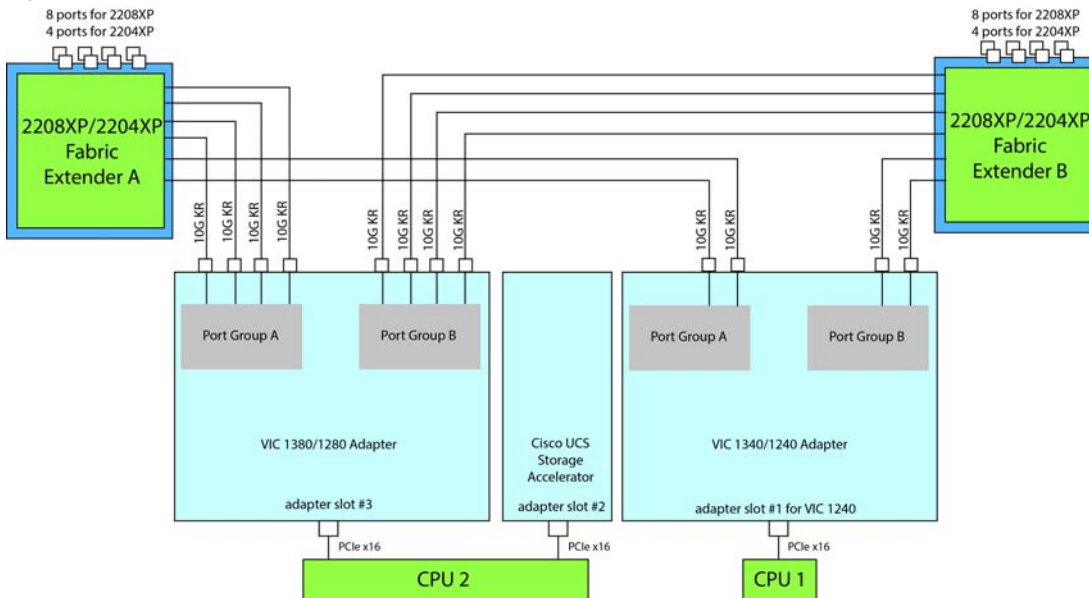

In *Figure 12*, two ports from the VIC 1340/1240 are channeled to Fabric Extender A and two are channeled to Fabric Extender B. Adapter slot 2 is empty. The VIC 1380/1280 installed in adapter slot 3 channels four ports to each of the Fabric Extenders. The result is 60 Gb of bandwidth to each Fabric Extender.

Figure 12   VIC 1340/1240 and VIC 1380/1280 (adapter slot 2 empty)
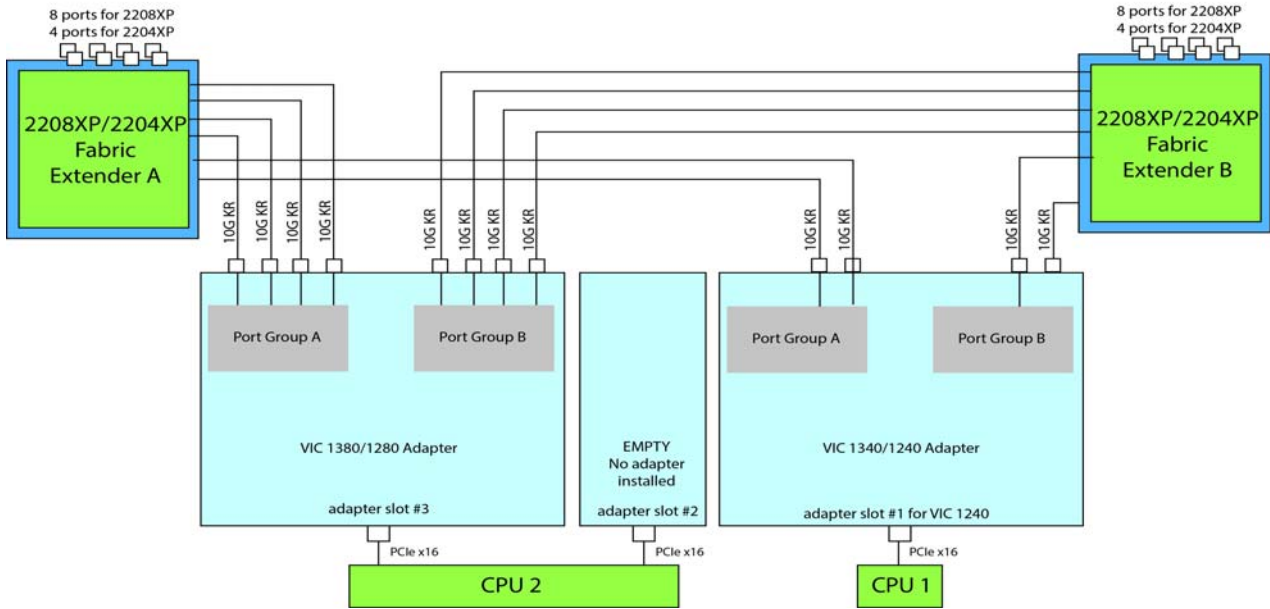

In *Figure 13*, no VIC 1340/1240 is installed. A Cisco UCS Storage Accelerator adapter is installed in slot 2, but provides no network connectivity. The VIC 1380/1280 installed in adapter slot 3 channels four ports to each of the Fabric Extenders. The result is 40 Gb of bandwidth to each Fabric Extender.

Figure 13   No VIC 1340/1240 installed, UCS Storage Accelerator in slot 2 and VIC 1380/1280 in slot 3
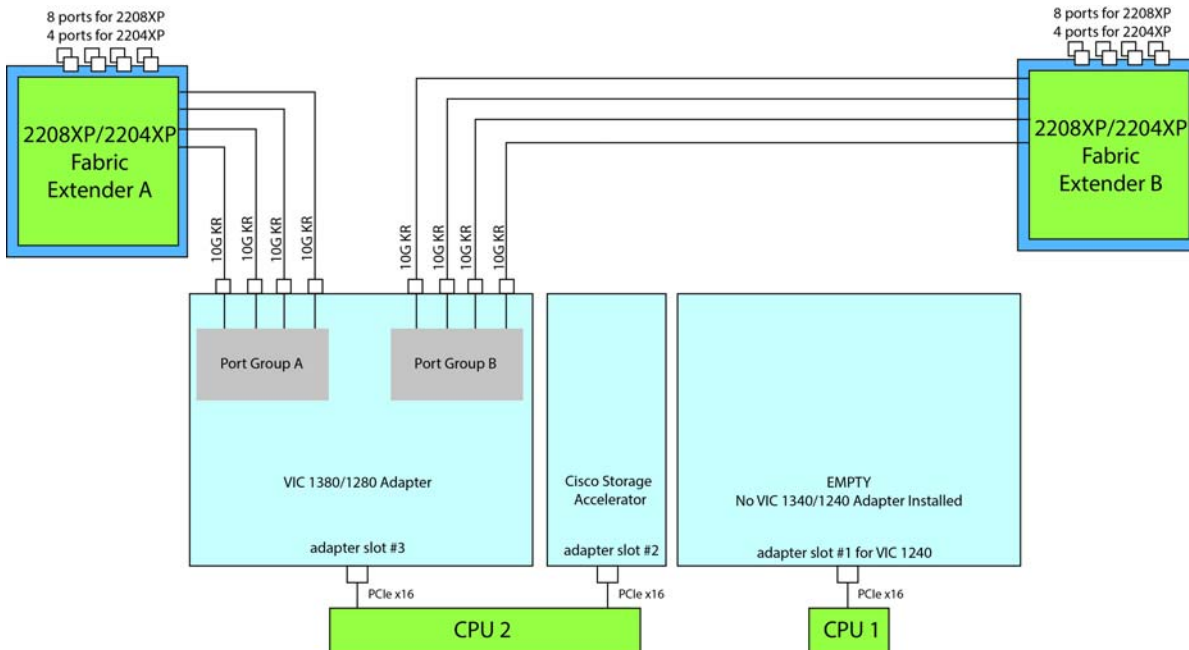

In *Figure 14*, no VIC 1340/1240 is installed. Adapter 2 slot is also not occupied. The VIC 1380/1280 installed in adapter slot 3 channels four ports to each of the Fabric Extenders. The result is 40 Gb of bandwidth to each Fabric Extender.

Figure 14   No VIC 1340/1240 installed, no adapter installed in slot 2, and VIC 1380/1280 in slot 3
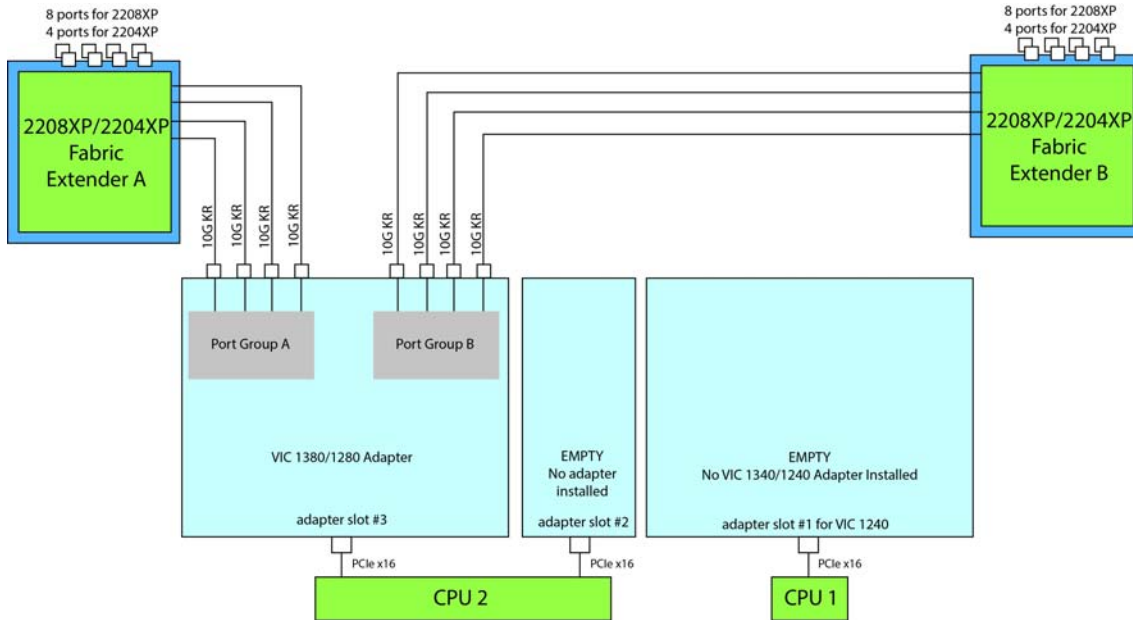

In *Figure 15*, two ports from the VIC 1340/1240 are channeled to Fabric Extender A and two are channeled to Fabric Extender B. The Port Expander Card installed in adapter slot 2 acts as a pass-through device, channeling two ports to each of the Fabric Extenders. A Cisco UCS storage accelerator is installed in slot 3, but provides no network connectivity. The result is 40 Gb of bandwidth to each Fabric Extender.

Figure 15   VIC 1340/1240 and Port Expander in Adapter Slot 2 with UCS storage accelerator in slot 3
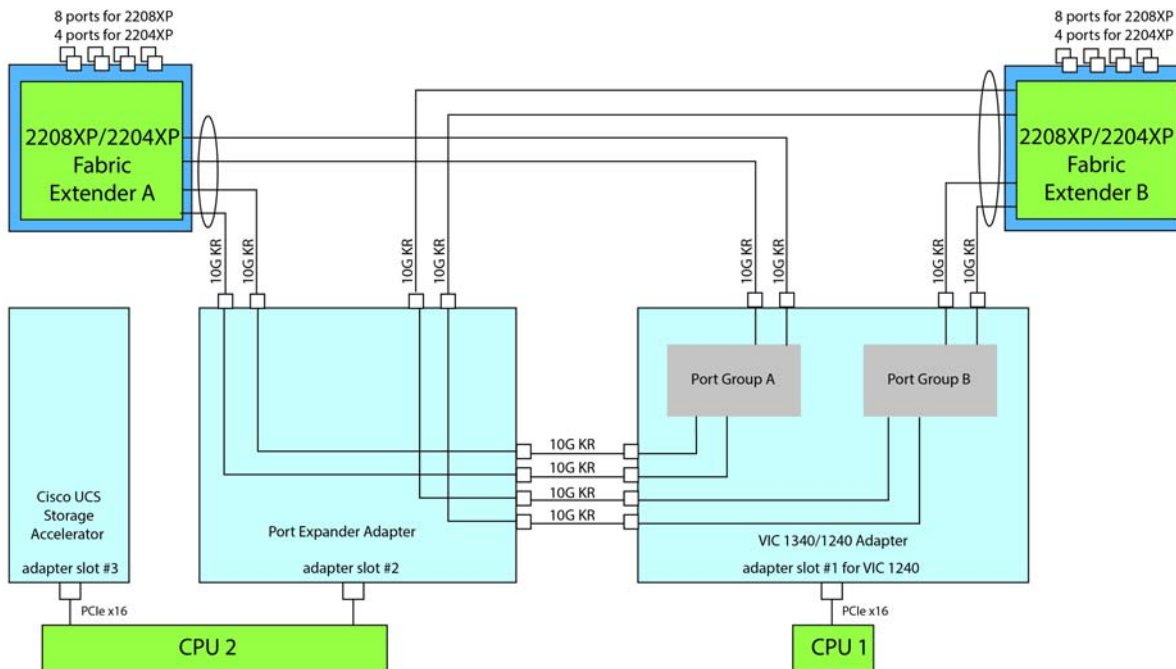

In *Figure 16,* two ports from the VIC 1340/1240 are channeled to Fabric Extender A and two are channeled to Fabric Extender B. The Port Expander Card installed in adapter slot 2 acts as a pass-through device, channeling two ports to each of the Fabric Extenders. Adapter slot 3 is empty. The result is 40 Gb of bandwidth to each Fabric Extender.

Figure 16   VIC 1340/1240 and Port Expander in Adapter Slot 2 (adapter slot 3 empty)

In *Figure 17,* two ports from the VIC 1340/1240 adapter are channeled to Fabric Extender A and two are channeled to Fabric Extender B. UCS storage accelerators are installed in adapter slots 2 and 3, but provide no network connectivity. The result is 20 Gb of bandwidth to each Fabric Extender.

Figure 17   VIC 1340/1240 with UCS storage accelerators installed in adapter slots 2 and 3

In *Figure 18*, two ports from the VIC 1340/1240 adapter are channeled to Fabric Extender A and two are channeled to Fabric Extender B. A UCS storage accelerator is installed in adapter slot 2 but provides no network connectivity and slot 3 is empty. The result is 20 Gb of bandwidth to each Fabric Extender.

Figure 18   VIC 1340/1240 with UCS storage accelerator installed in adapter slot 2 and slot 3 empty

In *Figure 19*, two ports from the VIC 1340/1240 adapter are channeled to Fabric Extender A and two are channeled to Fabric Extender B. Adapter slots 2 and 3 are empty. The result is 20 Gb of bandwidth to each Fabric Extender.

Figure 19   VIC 1340/1240 (adapter slots 2 and 3 empty)

Cisco UCS B460 M4 Blade Server
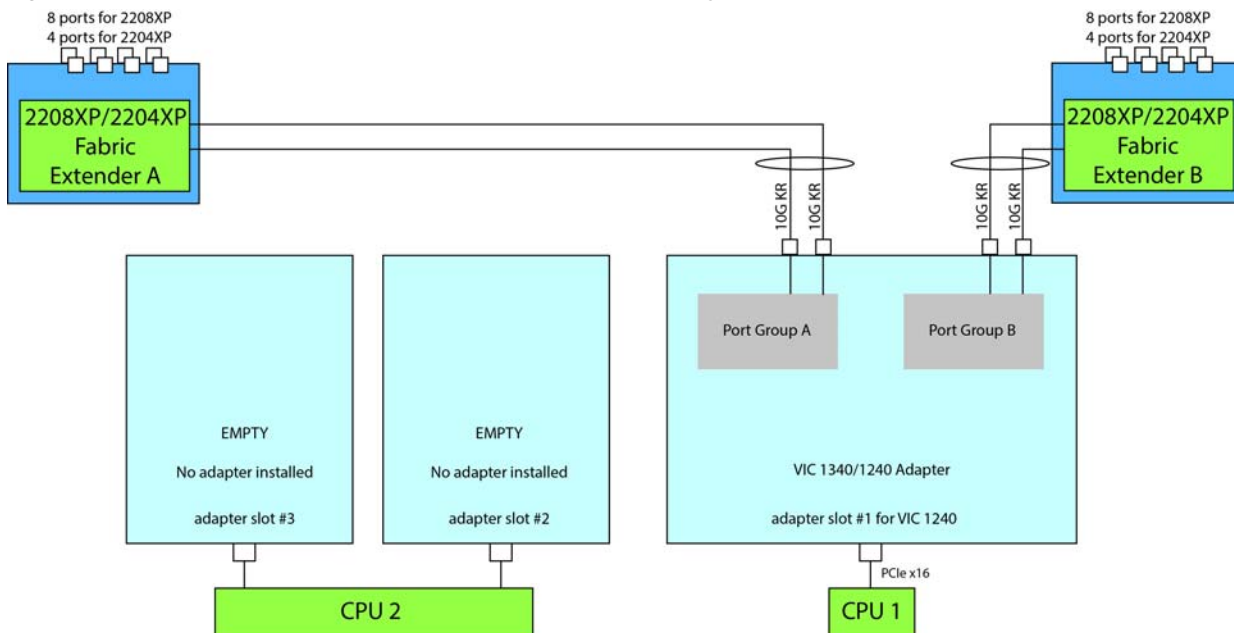

Connectivity using the Cisco UCS 2104XP Fabric Extender

The connectivity options for each of the two Blade Modules shown in *Figure 20* through *Figure 29* are summarized in *Table 31*.

Table 31 Supported Adapter[1] Combinations Using the 2104XP FEX

Adapter Slot 1	Adapter Slot 2	Adapter Slot 3	Total Available Bandwidth
			2 x 2104XP
VIC 1340/1240	Port Expander Card	VIC 1380/1280	40 Gb *Figure 20 on page 58*
VIC 1340/1240	Cisco UCS Storage Accelerator	VIC 1380/1280	40 Gb *Figure 21 on page 58*
VIC 1340/1240	Not populated	VIC 1380/1280	40 Gb *Figure 22 on page 59*
Not populated	Cisco UCS Storage Accelerator	VIC 1380/1280	20 Gb *Figure 23 on page 59*
Not populated	Not populated	VIC 1380/1280	20 Gb *Figure 24 on page 60*
VIC 1340/1240	Port Expander Card	Cisco UCS Storage Accelerator	20 Gb *Figure 25 on page 60*
VIC 1340/1240	Port Expander Card	Not populated	20 Gb *Figure 26 on page 61*
Note: for the following configuration, do not mix a Fusion-io adapter with an LSI WarpDrive. Slots 2 and 3 must have identical types of storage cards.			
VIC 1340/1240	Cisco UCS Storage Accelerator	Cisco UCS Storage Accelerator	20 Gb *Figure 27 on page 61*
VIC 1340/1240	Cisco UCS Storage Accelerator	Not populated	20 Gb *Figure 28 on page 62*
VIC 1340/1240	Not populated	Not populated	20 Gb *Figure 29 on page 62*

Notes . . .

1. In the server BIOS and on the motherboard, "Adapter 1," "Adapter 2," and "Adapter 3" are labeled as "mLOM," "Mezz 1," and "Mezz 2," respectively

In *Figure 20*, one port from the VIC 1340/1240 is connected to Fabric Extender A and one is connected to Fabric Extender B. The Port Expander Card installed in adapter slot 2 has no role in this case. In addition, the VIC 1380/1280 channels one port to each Fabric Extender. The result is 20 Gb of bandwidth to each Fabric Extender.

Figure 20   VIC 1340/1240, Port Expander in adapter slot 2, and VIC 1380/1280 in adapter slot 3
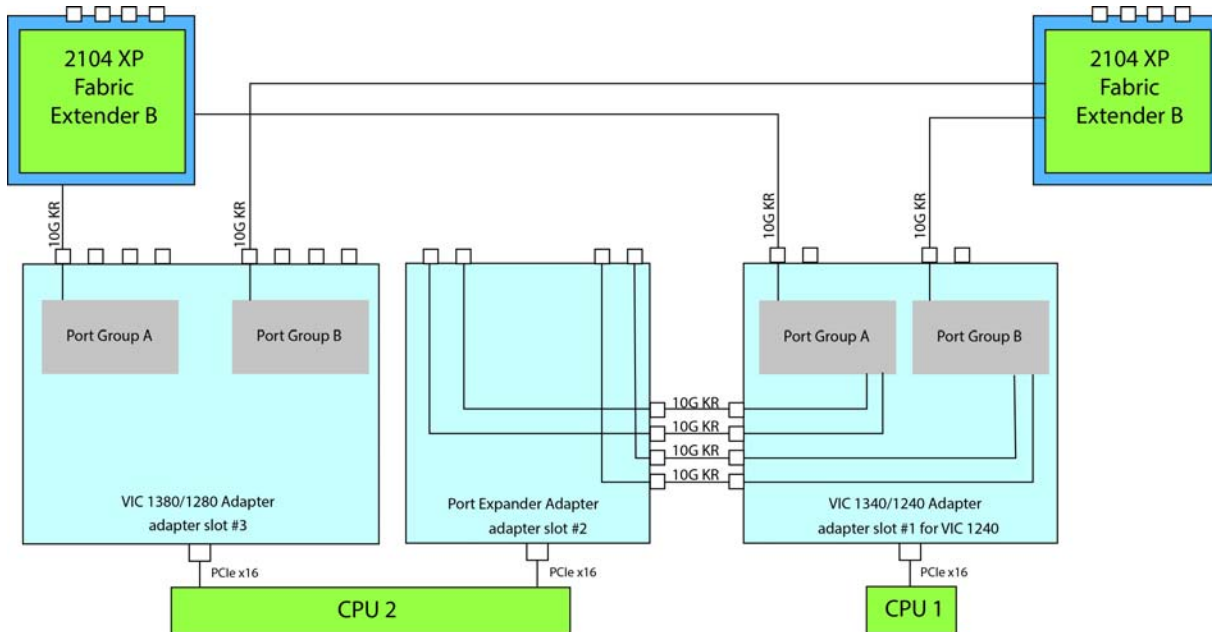

In *Figure 21*, two ports from the VIC 1340/1240 are connected, one to each Fabric Extender. A Cisco UCS Storage Accelerator adapter is installed in slot 2, but provides no network connectivity. The VIC 1380/1280 installed in adapter slot 3 connects two ports, one to each of the Fabric Extenders. The result is 20 Gb of bandwidth to each Fabric Extender.

Figure 21   VIC 1340/1240, Cisco UCS SA in adapter slot 2, and VIC 1380/1280 in adapter slot 3
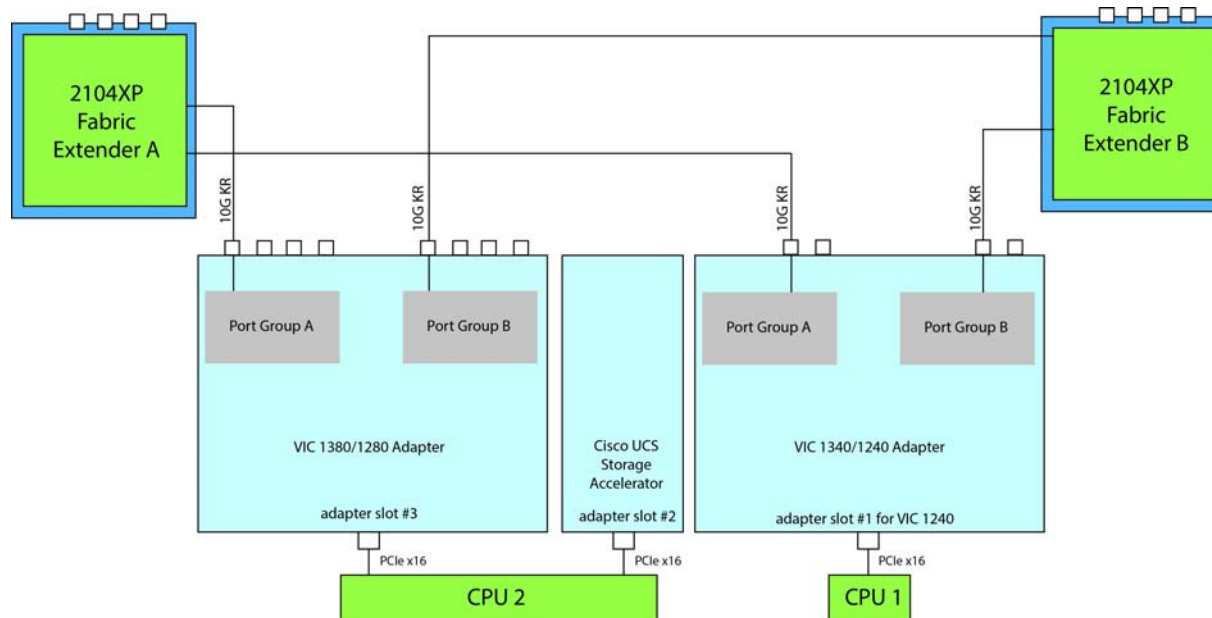

In *Figure 22*, two ports from the VIC 1340/1240 are connected, one to each Fabric Extender. Adapter slot 2 is empty. The VIC 1380/1280 installed in adapter slot 3 connects two ports, one to each of the Fabric Extenders. The result is 20 Gb of bandwidth to each Fabric Extender.

Figure 22   VIC 1340/1240 and VIC 1380/1280 (adapter slot 2 empty)
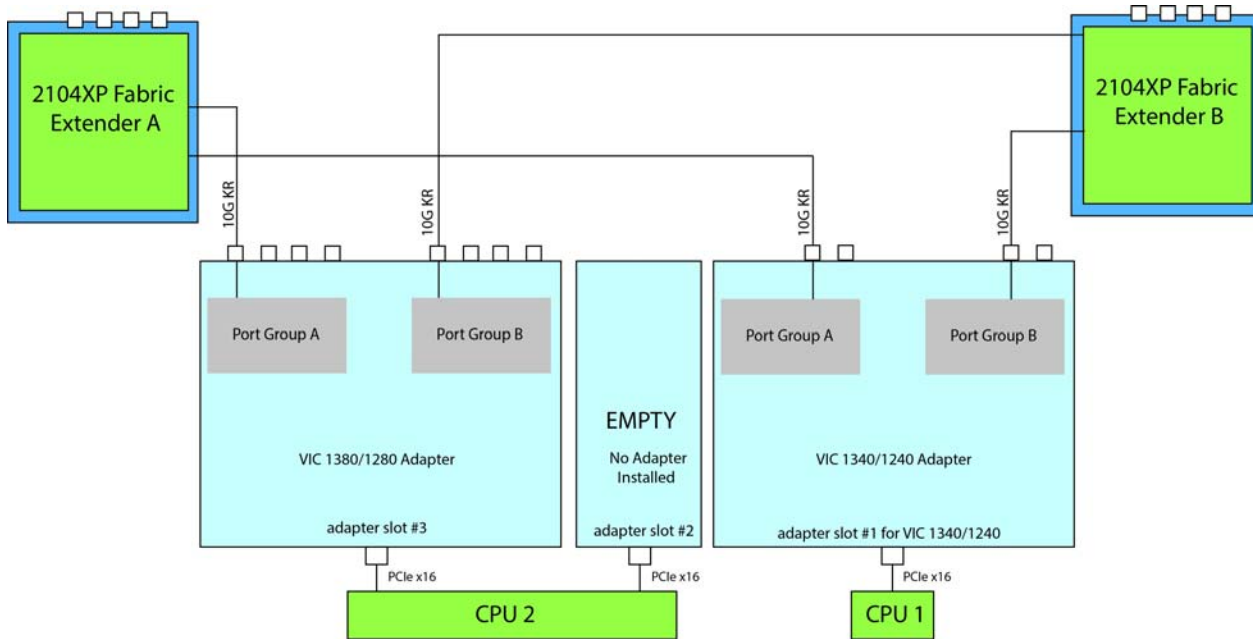

In *Figure 23*, no VIC 1340/1240 is installed. A Cisco UCS Storage Accelerator adapter is installed in slot 2, but provides no network connectivity. The VIC 1380/1280 installed in adapter slot 3 connects two ports, one to each of the Fabric Extenders. The result is 10 Gb of bandwidth to each Fabric Extender.

Figure 23   No VIC 1340/1240 installed, UCS Storage Accelerator in slot 2 and VIC 1380/1280 in slot 3

In *Figure 24*, no VIC 1340/1240 is installed. Adapter slot 2 is also not occupied. The VIC 1380/1280 installed in adapter slot 3 connects two ports, one to each Fabric Extender. The result is 10 Gb of bandwidth to each Fabric Extender.

Figure 24   No VIC 1340/1240 installed, no adapter installed in slot 2, and VIC 1380/1280 in slot 3

In *Figure 25*, one port from the VIC 1340/1240 is connected to Fabric Extender A and one is connected to Fabric Extender B. The Port Expander Card installed in adapter slot 2 has no role in this case. A Cisco UCS storage accelerator is installed in slot 3, but provides no network connectivity. The result is 10 Gb of bandwidth to each Fabric Extender.

Figure 25   VIC 1340/1240 and Port Expander in Adapter Slot 2 with UCS storage accelerator in slot 3
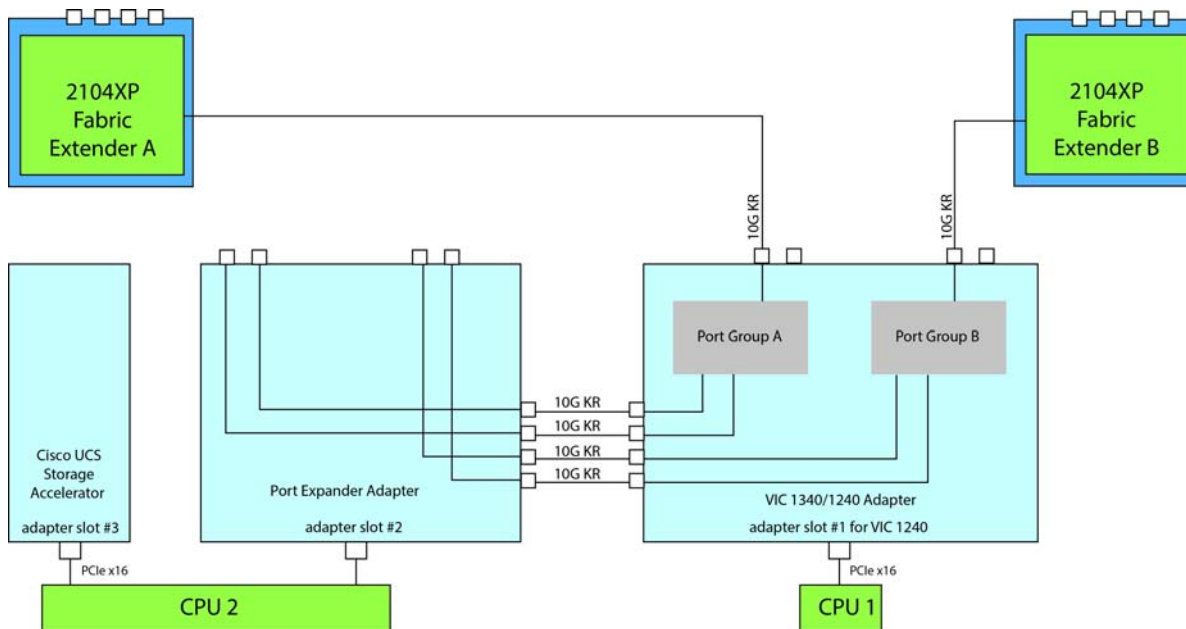

In *Figure 26*, one port from the VIC 1340/1240 is connected to Fabric Extender A and one is connected to Fabric Extender B. The Port Expander Card installed in adapter slot 2 has no role in this case. Adapter slot 3 is empty. The result is 10 Gb of bandwidth to each Fabric Extender.

Figure 26   VIC 1340/1240 and Port Expander in Adapter Slot 2 (adapter 3 empty)

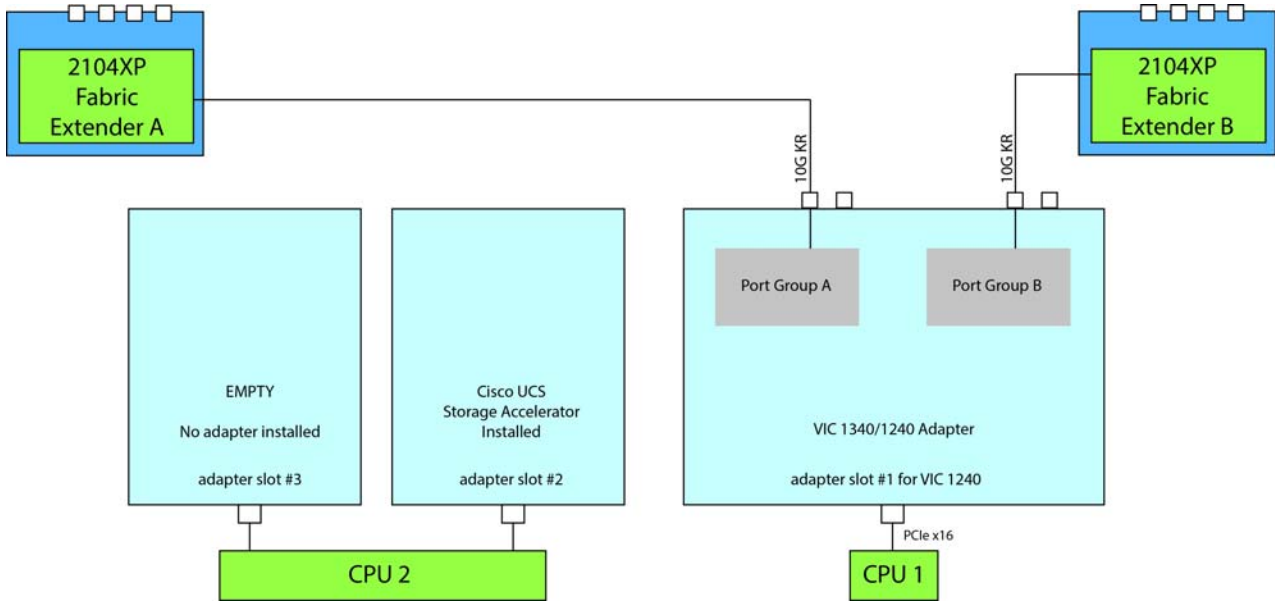

In *Figure 27*, two ports from the VIC 1340/1240 adapter are connected, one to each Fabric Extender. UCS storage accelerators are installed in adapter slots 2 and 3, but provide no network connectivity. The result is 10 Gb of bandwidth to each Fabric Extender.

Figure 27   VIC 1340/1240 with UCS storage accelerators installed in adapter slots 2 and 3
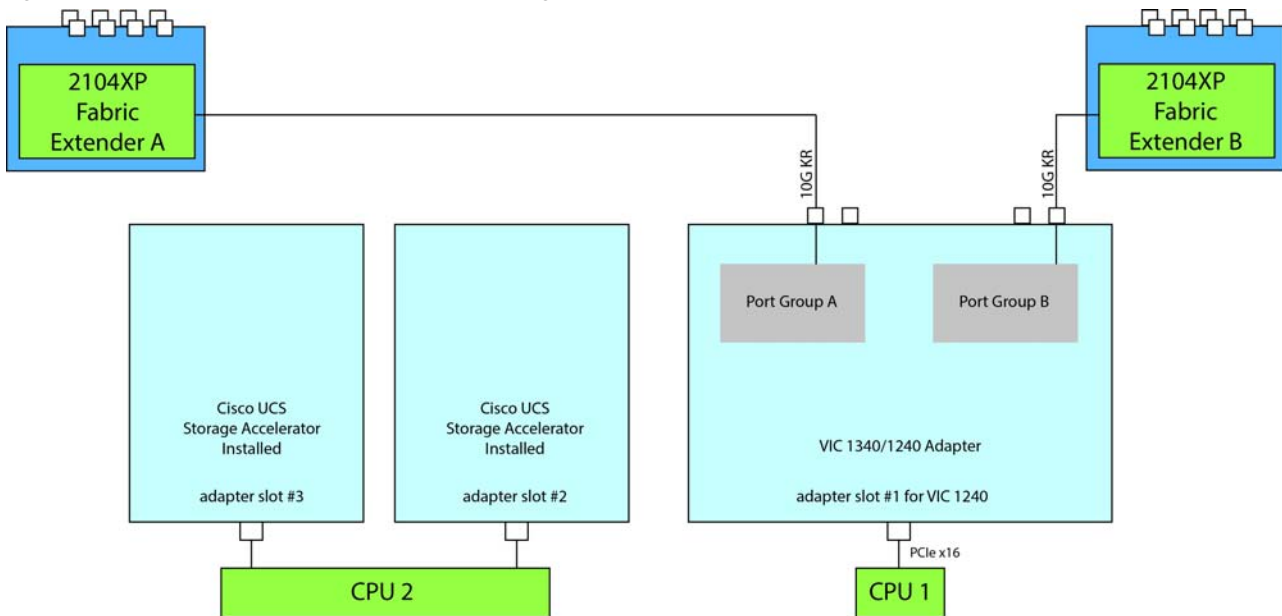

In *Figure 28*, two ports from the VIC 1340/1240 adapter are connected, one to each Fabric Extender. A UCS storage accelerator is installed in adapter slot 2 but provides no network connectivity and slot 3 is empty. The result is 10 Gb of bandwidth to each Fabric Extender.

Figure 28   VIC 1340/1240 with UCS storage accelerator installed in adapter slot 2 and slot 3 empty

In *Figure 29*, two ports from the VIC 1340/1240 adapter are connected, one to each to Fabric Extender. Adapter slots 2 and 3 are empty. The result is 10 Gb of bandwidth to each Fabric Extender.

Figure 29   VIC 1340/1240 (adapter slots 2 and 3 empty)

Cisco UCS B460 M4 Blade Server
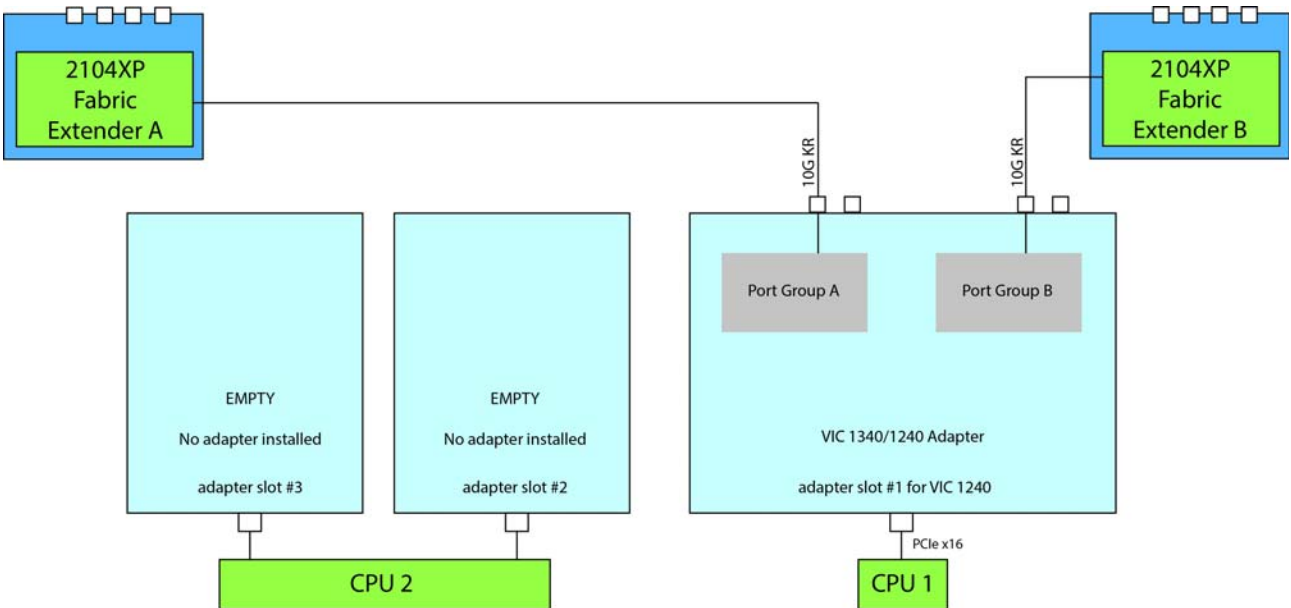

TECHNICAL SPECIFICATIONS

Dimensions and Weight

Table 32 UCS B460 M4 Dimensions and Weight[1]

Parameter	Value
Height	4.04 in. (102.6 mm)
Width	17.20 in.(436.9 mm)
Depth	25.5 in. (647.7 mm)
Weight	66.14 lbs (30 kg)[*]

Notes . . .

1. The system weight given here is an estimate for a fully configured system and will vary depending on the number of CPUs, memory DIMMs, and other optional items.

Power Specifications

For configuration-specific power specifications, use the Cisco UCS Power Calculator at:
